 MAGNA
ANNUAL REPORT 2000

E V O L V I N G

Magna International Inc.

Magna International Inc. is a leading global supplier of technologically advanced automotive components, systems and complete modules.

The Company employs approximately 62,000 people at 166 automotive manufacturing divisions and 31 product development and engineering centres in 18 countries.

As the most diversified automotive supplier in the world, Magna designs, engineers and manufactures a complete range of exterior and interior vehicle systems. Magna also provides complete vehicle design, engineering and assembly services to its customers, the major automotive Original Equipment Manufacturers (OEMs).

Magna is recognized by the world's major OEMs for its advanced technology, product innovation and total vehicle program management.

Magna's Corporate Constitution

Employee Equity and Profit Participation

Ten percent of Magna's profit before tax will be allocated to employees. These funds will be used for the purchase of Magna shares in trust for employees and for cash distributions to employees, recognizing length of service.

Shareholder Profit Participation

Magna will distribute, on average, not less than 20 percent of its annual net profit after tax to shareholders.

Management Profit Participation

To obtain long-term contractual commitment from senior management, the Company provides a compensation arrangement which, in addition to a base salary below industry standards, allows for the distribution of up to six percent of Magna's profit before tax.

Research and Development

Magna will allocate a minimum of seven percent of its profit before tax for research and development to ensure the long-term viability of the Company.

Social Responsibility

The Company will allocate a maximum of two percent of its profit before tax for charitable, cultural, educational and political purposes to support the basic fabric of society.

Minimum Profit Performance

Management has an obligation to produce a profit. If Magna does not generate a minimum after-tax return of four percent on share capital for two consecutive years, the Class A shareholders, voting as a class, will have the right to elect additional directors.

Unrelated Investments

Class A and Class B shareholders, with each class voting separately, will have the right to approve any investment in an unrelated business in the event such investment together with all other investments in unrelated businesses exceeds 20 percent of Magna's equity.

Board of Directors

Magna believes that outside directors provide independent counsel and discipline. A majority of the members of Magna's Board of Directors will be outsiders.

Magna is a public company with two classes of shares: a Class B share which carries a multiple vote, held primarily by management and their associates, and a Class A share for investors and employees which carries a single vote. This share structure has been in place since 1978 and enables management to have operating control of the Company on a day-to-day basis, provided it adheres to the Corporate Constitution.

Any change to Magna's Corporate Constitution requires the approval of the Class A and Class B shareholders, with each class voting separately.

Frank Stronach

The Chairman's Message

Fiscal 2000 proved to be another great year for Magna International Inc. by virtually any standard of measurement, with record sales of over \$10.5 billion and record net profits after tax of \$598 million.

Management's overall mandate remains unchanged – namely, to run a successful, world class company. In order to do that on an ongoing basis, we must be able to satisfy the needs of our customers and our employees, and we must be able to produce a healthy profit. Based upon these key criteria, we believe that Magna has done an exemplary job. Our record profits were shared with our employees and shareholders via the predetermined formula outlined in Magna's Corporate Constitution.

Motivating Human Capital

The past year was successful, but we must constantly analyze what has to be done to remain competitive on a global basis. More than ever before, human capital is the critical factor when it comes to determining the success of a company in today's global economy. It is the companies which can best attract and motivate human capital that will ultimately be successful over the long term. We at Magna believe that we have put in place a

system which is designed to attract and motivate human capital for greater productivity and ingenuity.

Our challenge going forward is to ensure that this system is working to the fullest extent possible for the benefit of all our stakeholders. One proven method for doing so is through our long-established strategy of spinning out certain automotive systems groups, when they are sufficiently mature, as separate public companies.

As recently announced, we have commenced the process of preparing Magna Steyr and Intier Automotive, our new interiors group, to become separate public companies. These spinouts will proceed along the same lines as the previous successful public offerings of Tesma International Inc., our engine and transmission systems group, and Decoma International Inc., our exterior systems group. Cosma, our most mature group, will continue to remain a wholly owned subsidiary and an integral part of Magna.

Providing Equity Incentives

I strongly believe that this “spinco” strategy will be a win for our customers, a win for our managers and employees, and a win for our shareholders. Let me explain why. First of all, spinning out certain automotive systems groups will unleash the human capital within each of our groups by providing equity and profit incentives which are directly tied to the performance of each group. In addition, by bringing employee equity ownership and profit sharing closer to home, employees in our public automotive systems groups will have even greater incentives to participate in the growth of their own businesses.

“This strategy is the best way to preserve and continually renew Magna’s entrepreneurial culture – a culture which gives our people equity ownership in their places of business, fosters individual initiative and involvement, and ensures that our operations remain lean, flexible and customer-focused.”

Spinning out certain automotive systems groups into separate, publicly traded corporations provides other benefits as well. Doing so allows us to avoid the inevitable bureaucratic build-up that comes with growth and strengthens Magna’s long-established, decentralized operating philosophy. Creating separate public companies also ensures that these automotive systems groups remain focused on their core areas of automotive systems expertise. As separate public companies, they will be more attuned to the needs of our customers and better positioned to adapt to rapid changes in the marketplace.

Most importantly, this strategy is the best way to preserve and continually renew Magna’s entrepreneurial culture – a culture which gives our employees equity ownership in their places of business, fosters individual initiative and involvement, and ensures that our operations remain lean, flexible and customer-focused.

Magna’s Entrepreneurial Culture

Magna, as the custodian of this unique corporate culture, will always be the glue that binds together our various automotive systems groups. Magna’s executive management will continue to provide the overall strategic planning and vision for the Company as a whole. Furthermore, each of our separate public automotive systems groups will continue to be guided by Magna principles such as equity and profit participation which are enshrined in our Corporate Constitution and Employee’s Charter – principles which have long been the hallmark of our success.

Don Walker has agreed to become the new President and CEO of Intier and Siegfried Wolf has agreed to become the President and CEO of Magna Steyr. Each of these men has made great contributions to Magna over the last decade during which our sales and profits grew significantly. We are delighted that both Don and Siegfried have agreed to undertake these new challenges and will continue as part of the Magna family. The Board is also confident that the management team led by Belinda Stronach and Jim Nicol have the complementary skills and experience to continue to provide strong leadership and ensure Magna’s continued success.

In closing, I wish to thank our shareholders for their confidence and support. I firmly believe that our ongoing focus on enhancing profitability will continue to create shareholder value. I would also like to thank our customers, who continue to reward us with new business and who look to us to supply quality products. Lastly, I wish to thank our employees and our managers – the highly motivated people who have made Magna one of the most successful companies in the global automotive industry.

Frank Stronach
Chairman of the Board

Letter to Shareholders

Belinda Stronach and James Nicol

Fiscal 2000 was another successful year for Magna, one which saw us achieve new records in sales, profits and earnings per share. Despite these successes, we continue to look for ways to enhance our global competitiveness. As a result, we have initiated the consolidation of our operations into major global automotive systems groups.

We have now substantially achieved global scope and critical mass in key vehicle supply areas such as exteriors, body and chassis systems and interiors. Earlier this year we initiated a reorganization that created two new groups – Magna Steyr and Intier Automotive – and expanded the global capabilities of our Decoma International Inc. group. Magna Steyr capitalizes on our unique capability to combine world-calibre chassis and powertrain technologies with leading-edge hydroformed vehicle frames to ultimately create a “chassis-on-wheels”™ module. Intier consolidates our interior, seating and closure systems to create a group that can provide total integrated interior solutions to our customers. Decoma, which is a separate public company, now incorporates our European exterior operations to provide our customers with worldwide exterior systems capabilities.

Global Systems Groups

This reorganization is part of our ongoing efforts to consolidate operations and strategically align our automotive product groups into “super groups” – standalone systems groups focused on providing large vehicle modules and systems in each key vehicle area. This product alignment will help boost Magna content on various vehicles while also providing our customers with turnkey solutions for building vehicles much more quickly and cost-effectively. The move toward the creation of worldwide autonomous systems groups is also in keeping with the principles of Magna’s decentralized operating philosophy and entrepreneurial culture. At the same time, we will continue to foster corporate-wide synergies between the groups, co-ordinate cross group opportunities on modules and vehicles, and provide overall strategic direction.

The past year also saw Magna further solidify its global leadership in vehicle program management, particularly in Europe, where we assemble a growing number of vehicles for our customers.

Strong Balance Sheet

Magna heads into fiscal 2001 in a solid position to meet the challenges of the year ahead. Despite an anticipated reduction in North American vehicle production during the coming year, Magna is financially strong relative to our competitors. We have a healthy balance sheet, with little debt, cash reserves of more than \$600 million, and strong cash flow. These resources are available to be utilized to acquire new or complementary technologies or undervalued assets should the opportunity arise.

"Although the year ahead for the automotive industry as a whole promises to be challenging, we are nevertheless optimistic that Magna will be able to leverage its deep financial resources, solid customer relationships and diverse product capabilities to seize new opportunities for greater growth."

In fiscal 2000, Magna increased its average dollar content on North American produced vehicles to an all-time high of \$344, while average European content per vehicle remains strong at \$162 despite the significant negative impacts of foreign exchange translation. In addition to our significant dollar content on a wide range of best-selling cars, trucks, minivans and sport utility vehicles, Magna has strong product content on a number of new vehicle launches set for calendar 2001. Going forward, we expect to continue to increase our average content per vehicle in both North America and Europe across a broad range of high volume vehicles.

Focus On Innovation

Our focus on product development and innovation, together with improved operating performance, contributed to higher sales and profits over the previous fiscal year. Consolidated sales in fiscal 2000 increased to over \$10.5 billion, net income was \$598 million and fully diluted earnings per share was a record \$5.26, before other income. We will remain focused on improving return on assets through bottom and top-line growth and believe that true value will be recognized in the future as a result of these efforts.

Although the year ahead for the automotive industry as a whole promises to be challenging, we are nevertheless optimistic that Magna will be able to leverage its deep financial resources, solid customer relationships and diverse product capabilities to seize new opportunities for greater growth. Our customers – the world's major automakers – continue to look to us to provide product solutions that offer reduced costs, improved quality and innovative technology. We view the current cost-cutting climate as an opportunity to further demonstrate Magna's proven ability to provide superior products at highly competitive prices. As one of the founding participants of Covisint LLC, the world's largest business-to-business Internet exchange, we also view the continuing move towards e-commerce within the automotive industry as a positive step that will streamline business processes and help us manage costs associated with product design, systems engineering and supply logistics.

On behalf of our Board of Directors, we wish to thank our employees, shareholders and customers for helping to make Magna one of the world's largest and most successful automotive systems suppliers.

Belinda Stronach
Vice-Chairman and Chief Executive Officer

James Nicol
President and Chief Operating Officer

Magna at a Glance

Global Automotive Sales by Customer

Total Number of Automotive Employees

Magna's global operations include 166 manufacturing facilities and more than 30 R&D centres focusing on the development of advanced automotive technologies and vehicle systems integration.

Global Automotive Operations

During 2000, the Company's global automotive operations were segmented between its complete vehicle engineering and assembly operations, referred to as Tier 0.5™ Vehicle and Systems Integration, and its automotive manufacturing operations, referred to as Tier One and Two suppliers in the automotive industry. Publicly traded Tier One and Two operations are reported separately, as oversight of group management has been delegated to separate independent boards of directors.

Tier 0.5™ Vehicle and Systems Integration

The Tier 0.5™ Vehicle and Systems integration divisions provide complete vehicle engineering, assembly of niche or derivative vehicles for OEM customers, technologically advanced integrated automotive systems, and a wide range of services and products for the design and development of integrated automotive systems.

Tier One and Two Automotive Manufacturing Operations

Tier One and Two automotive manufacturing divisions supply a variety of products including: (i) body products supplied by the Company's metallic body and chassis systems divisions, including divisions producing hydro-formed components and assemblies, and other exterior products supplied by the Company's wholly owned exterior systems divisions in Europe; (ii) interiors products supplied by the Company's seating and interior systems divisions; (iii) four-wheel-drive powertrain products supplied by the Company's Steyr Powertrain divisions; and (iv) other automotive products supplied by the Company's closure systems divisions and exterior and interior mirror systems divisions.

Publicly Traded Tier One and Two Automotive Manufacturing Operations

Tier One and Two publicly traded automotive manufacturing divisions supply a variety of products including exterior body products supplied by Decoma Exterior Systems (which includes Decoma International Inc., a publicly traded company, Decoma Exterior Trim and Bestop) and powertrain products supplied by Tesma International Inc., a publicly traded supplier of engine, transmission and fueling systems and components.

Operating Structure

Automotive Systems Groups

Magna's automotive divisions are grouped along global product lines. Each Automotive Systems Group provides full service systems integration in a specific vehicle area.

Division Management

Within the framework of the Magna Corporate Constitution and the Magna Employee's Charter, division managers have a wide degree of latitude in running their day-to-day operations. Their compensation is tied to the performance of the division, with each manager receiving a relatively low base salary and a pre-determined portion of the division's profits. This compensation formula enables Magna to attract and retain entrepreneurial managers with manufacturing expertise.

Automotive Systems Group Management

The most experienced and successful division managers advance to the ranks of Group management, which is responsible for co-ordinating product development, finance, marketing and maximizing manufacturing efficiencies in the divisions which make up the Group. Group management is paid a relatively low base salary and a pre-determined portion of the Group's profits. When a Group's management and business is mature, the Company

will consider whether to spin the Group out as a separate public company.

Executive Management

Executive management coordinates advanced systems development and manufacturing, ensures customer satisfaction and interfaces with the investment community. In addition, executive management is responsible for the long-term strategic planning and future growth of the Company and monitoring Group management. Members of executive management are paid a base salary below industry standards and up to six percent of Magna's profit before tax.

Magna also has an agreement with Stronach & Co. to provide business development and other management services. These services include: facilitating the application of the Company's operating principles and philosophies, co-ordinating strategic planning (including implementation through business acquisitions and the acquisition of new products and technologies), recruiting and developing new management and promoting corporate goodwill with various stakeholder groups.

Operating Principles

At the heart of Magna's operating structure is an entrepreneurial culture that builds ownership and inspires pride in all its people. This dynamic corporate culture, highlighted in the principles below, is the cornerstone of Magna's success.

Decentralized Operating Structure

Magna's manufacturing divisions operate as independent profit centres. This decentralized structure prevents bureaucracy and makes the Company more responsive to customer needs and the changing industry.

Employee Involvement

By keeping operating units relatively small and flexible, Magna fosters greater employee involvement and initiative. This environment also allows the Company to recognize and reward individuals' contributions and maintain open communication.

Entrepreneurial Managers

Entrepreneurial, hands-on managers with strong tooling, engineering and manufacturing backgrounds run Magna's divisions. Division managers are responsible for ensuring profitability, achieving customer satisfaction and upholding the principles of the Magna Employee's Charter.

Employee's Charter

The Magna Employee's Charter strives to create a quality work environment by guaranteeing employees fair treatment, a safe and healthful workplace and competitive wages and benefits.

Employee Ownership

Through the Equity Participation and Profit Sharing Program, employees receive ten percent of the Company's annual profits before tax. As part-owners working in an environment where productivity is rewarded, Magna employees are motivated to produce quality products at competitive prices.

Through fiscal 2000, Magna's global automotive operations were segmented along the following lines:

- Tier 0.5™ Vehicle and Systems Integration, Magna's complete vehicle engineering and assembly operations
- Tier One and Two Automotive Manufacturing Operations, and
- Publicly Traded Tier One and Two Automotive Manufacturing Operations, including Decoma International Inc. and Tesma International Inc.

On February 21, 2001, Magna's Board of Directors, based on the report and recommendations of a special board committee, unanimously approved a corporate reorganization in accordance with Magna's spinoff policy and shareholder guidelines approved by Magna's shareholders in 1982 and 1987.

Newly Created Operating Groups

Magna's Steyr-Daimler-Puch vehicle assembly and Steyr Powertrain groups have been reorganized under the name Magna Steyr.

Magna Steyr is one of the world's premier suppliers of total vehicle engineering, niche vehicle assembly and powertrain modules. Magna Steyr will work with the hydroforming and stamping operations of Magna's Cosma group to develop leading-edge hydroformed modules.

Magna's Atoma Closure Systems Group, Magna Seating Systems Group and Magna Interior Systems Group have been combined under the name Inter Automotive Inc.

Intier Automotive is a leading global interior systems integrator and supplier of complete seats, instrument and trim panels and closure systems.

Publicly Traded Operating Groups

- Tesma International Inc., a leading global supplier of engine, transmission and fuel systems.
- Decoma International Inc., a leading global supplier of exterior vehicle appearance systems.

Wholly Owned Operating Groups

Magna will retain ownership of Cosma, the world's leading independent metal former, and Magna Mirror Systems, one of the world's largest suppliers of exterior and interior mirrors.

Magna has established an Executive Strategy Committee responsible for co-ordinating global program strategies and customer requests across all of Magna's global systems groups.

Magna Steyr is the world's premier supplier of total vehicle engineering for OEM customers. The group is one of the world's leading suppliers of niche vehicle production, assembly and concept development, as well as a leading supplier of powertrain modules and all-wheel-drive systems. Magna Steyr is organized into five product groups: vehicle technology, engineering, powertrain, structures and European metalforming.

Industry Trends

As the consumer trend toward specialty vehicles continues to grow, OEMs are increasingly looking to outsource the project management and assembly of low-volume derivative vehicles. This trend offers significant opportunities to Magna Steyr. With more than 100 years of experience as a developer and manufacturer of vehicles, Magna Steyr is the industry's leading one-stop automotive service provider, offering the world's major OEMs a full spectrum of vehicle program management under one roof – everything from initial vehicle concept and design to final delivery. The combination of world class automotive technologies such as hydroforming and all-wheel-drive systems, together with Magna Steyr's unique capability to engineer, develop and manufacture complete vehicles, makes the group a strategic, value-added supplier to OEMs.

Magna Steyr assembles the Mercedes-Benz E Class 4MATIC and manufactures the powertrain module

Body-in-white assembly

Vehicle Technology

Magna Steyr's vehicle technology unit, Fahrzeugtechnik, provides a wide range of services, including managing turnkey concept-to-production projects that require complete vehicle competencies in automotive styling, prototype production, advanced development, vehicle safety testing, body-in-white assembly, supply chain management and final assembly and painting.

The group is the leading independent assembler of low volume and niche vehicles for the world's major

OEMs. Magna Steyr's total vehicle technology capabilities allow the group to provide small to medium volume assembly at a competitive cost in a world-class vehicle production facility.

The group produces more than 85,000 completely assembled vehicles on an annual basis, including the Mercedes-Benz M Class, the Mercedes-Benz G Class, the Mercedes-Benz E Class 4MATIC and the Jeep Grand Cherokee. Production efficiencies will expand capacity to a total of 160,000 vehicles per year. In addition, Magna Steyr was recently awarded a

contract to assemble a future Saab convertible model. The group is currently looking at the possibility of establishing additional vehicle assembly operations.

Mercedes-Benz E Class 4MATIC

Complete vehicle assembly and painting capabilities

Magna Steyr

Powertrain Systems

Magna Steyr is one of the world's most technologically advanced suppliers of total drivetrain technologies. Magna Steyr is also world-renowned for its 4x4 systems specifically developed for all-wheel-drive automobiles and off-road vehicles, fast growing product segments in the global automotive industry. The group supplies the four-wheel-drive transmission module for the Mercedes-Benz E Class 4MATIC, which is assembled at Magna Steyr, and develops and produces all-wheel-drive versions of a number of popular vehicles for customers such as General Motors, Volkswagen, DaimlerChrysler, Rover, Fiat and Renault.

Magna Steyr's all-wheel-drive transmissions provide superior traction and noise reduction and are increasingly sought after by OEMs as high-tech options on luxury vehicles and SUVs. Production began last year on a newly developed all-wheel-drive system and a rear-axle differential for General Motors. Other powertrain products that represent revenue potential for Magna Steyr include highly engineered and precision-manufactured transfer cases, axle modules and power take-off units. Magna Steyr has expanded its manufacturing and product development capabilities to include engine systems such as the mass balancing systems it supplies to BMW and Audi.

Transmission and Power Take-Off unit for the Renault Scenic RX4

Rear suspension module for the Pontiac Aztec

Power Take-Off unit for the Rover Freeland

Mass balancing system

Mercedes-Benz E Class body-in-white

Engineering

Magna Steyr is one of the most competent automotive engineering firms in the world, able to offer OEMs engineering know-how that spans the entire range of vehicle production. The group employs close to 2,000 automotive engineers and technicians focused strictly on the engineering and advanced development of components, systems, modules and complete vehicles as well as vehicle project development for OEM customers. Most recently, Magna Steyr worked on the engineering and development of the Audi TT roadster. The group is currently project managing the engineering and development of a new Saab convertible model that will be assembled at the Magna Steyr

facility in Graz, Austria. Engineering services include testing, simulation and systems integration.

Structures and European Metalforming

The trend for OEMs to source larger and more complex modules promises to provide significant growth opportunities in the area of vehicle body structures. Utilizing Magna's industry-leading hydroforming technology, Magna Steyr will work with the hydroforming and manufacturing operations of Magna's Cosma group to develop leading-edge hydroformed modules, independent rear suspension modules and "chassis-on-wheels"TM.

With core competencies and technological leadership in a number of key vehicle areas, including vehicle design and assembly, Magna Steyr is able to provide OEMs with complete project development and delivery.

The Audi TT roadster features Magna Steyr engineering

Co-ordinate measuring on a body structure

Hydroformed vehicle space frame

Intier Automotive is an industry leader in the development, manufacturing and just-in-time delivery of complete vehicle interiors and is one of the leading suppliers of interior systems, including cockpit modules, modular door systems and panels, overhead systems, complete seat systems, specialty seat mechanisms, and closure systems.

Industry Trends

Intier Automotive is a newly created global automotive systems group that brings together the product capabilities and systems expertise of Magna's interior, seating and closure systems groups. The new group is at the forefront of the industry trend toward the supply of complete interior modules – part of the overall industry evolution toward larger, more complex and more highly integrated vehicle systems. Going forward, Intier has the capability of providing OEM customers with the development and just-in-time delivery of complete vehicle interiors that integrate modular doors, cockpits, overhead systems, electronics, cargo and acoustical management systems, and complete seat systems.

Advanced Product Development

Intier is at the leading edge of development in interior modules and systems. The group recently developed a futuristic interior prototype shown

below with seamless cockpit and door module integration. The environmentally friendly cockpit module features advanced structural beam technology and state-of-the-art electronics, including electronic fingerprint starting, telematics and personal digital assistant interface, reconfigurable displays for driver and passenger and a “dock-and-lock” self-aligning connection system.

BMW R50 Mini cockpit module and door panel

The prototype “Design for Environment” door showcases Intier's design and manufacturing capabilities. The recyclable, three-piece door features product innovations such as flex circuit technology, combined sound and water management seal, a soft touch armrest with removable function module with integrated grab handle, door latch electronics and switch plate.

Intier's futuristic cockpit module and door panel

Saturn VUE split rear seat and fold flat front seat

Saturn VUE seat

Intier is also an industry leader in supplying complete cockpit modules, including instrument panels and consoles, on a just-in-time basis from product assembly and sequencing centres. The group supplies the highly integrated cockpit module and door panels on the new BMW R50 Mini. The instrument panel is manufactured at a facility where each production station features networked touch screen computers that aid in ensuring high quality manufacturing and

assembly. The door panel is produced using low pressure moulding, a one-step manufacturing process that provides high production efficiency and superior surfacing. Intier has contracts to supply total vehicle interiors for production vehicles in both North America and Europe.

Product Innovation

Complete seating systems represent a major product area within Intier. The group provides innovative seating solutions to the global automotive marketplace through the design, development and manufacture of seat systems that incorporate head restraints, armrests, seat tracks, seat recliners, seat frames and integrated

restraint systems. The group also specializes in seating systems that require unique functionality. An example is the complete seating system featured on the new Saturn VUE sport utility vehicle.

The front passenger seat folds flat for maximum cargo space, providing extra length for stowing long items such as skis or snowboards. In addition, the 70/30 split rear seat reclines for added passenger comfort and folds flat for multiple seating configurations and additional cargo space. The seats allow Saturn to deliver maximum value to the end consumer through added comfort and space as well as feature-based functionality built directly into the seats.

Intier also supplies complete seating systems for the new Renault Trafic and Opel Vivaro. The seats on these European light commercial vehicles can accommodate up to nine passengers and feature integrated restraint systems and patented EZ Entry seat features that provide passengers with improved access to rear seating.

Renault Trafic/Opel Vivaro bench seats with integrated restraint systems

Intier Automotive

Systems Integration

Bringing Magna's closure and interior systems together under one group will facilitate the development of systems integration for products such as modular doors. One such example is the highly innovative trim module which Intier has developed for a major European-based OEM. The trim module integrates all of the door latching systems onto the inside of the plastic door panel. Intier divisions have the capability to supply both the interior

Door trim module with integrated latching system

Integrated door cassette module

door panel and the closure systems which can be assembled as a modular unit for the customer. The module provides cost and weight savings as well as enhanced recyclability. In addition, final installation at the OEM assembly plant is simplified.

Intier has initiated a number of additional modular door design and development programs for several European and North American OEM customers. The group will also supply its first integrated plastic cassette module system this year. The cassette incorporates all of the major door hardware and latching componentry into one integrated module.

This innovative approach provides cost and weight savings as well as enhanced quality through pre-installation testing.

Through the development of roof-mounted power liftgate systems, Intier is also looking to expand its market-leading power closure technology beyond minivans to other vehicle segments such as SUVs and wagons. The roof-mounted power closure system provides enhanced operating benefits and flush interior fit.

Intier has also developed an innovative non-contact obstacle detection system for power closure doors and windows. This system uses sophisticated electronics to automatically stop power doors and windows when an object is detected.

Roof-mounted power closure liftgate system

Magna Mirror Systems is one of the world's largest suppliers of exterior and interior mirror systems, with fully integrated manufacturing and engineering centres in North America and Europe. The group is a global leader in mirror technologies, including actuators and positioning systems.

New Technologies

Magna Mirror Systems is expanding its global market penetration through the introduction of exterior and interior mirror products that feature leading-edge technologies. The group is integrating advanced technologies into a number of new mirror products to provide OEMs with enhanced safety, improved styling and added consumer convenience.

The inside informational mirror, currently featured on Mercedes-Benz taxi vehicles, is one such example. The mirror is able to display information through the mirror glass using high contrast, automatically modulated LED lighting. A wide range of information applications can be installed into the mirror system – everything from vehicle information and weather conditions to wireless messaging.

Inside informational mirror

Product Innovation

Magna Mirror Systems has been at the forefront of developing innovative products that offer enhanced functionality and safety. The integrated turn signal, for example, currently featured on Mercedes-Benz vehicles, integrates the signal turn light into the exterior mirror shell in a sleek wrap-around design. The group is continuing to grow product sales of the integrated turn signal mirror in the European market while also aggressively targeting the largely untapped North American market.

Industry Trends

One of the most significant automotive trends in the mirror segment is the move toward larger mirrors with extendable features for improved safety on large vehicles. The group's pull-out extendable mirror – the first in the automotive industry – is currently sold only as an aftermarket product but is being targeted directly at a broad range of OEM production vehicles, including trucks, minivans and SUVs. The patented extendable mirror features attractive styling and a telescoping mirror head for increased rear viewing.

Integrated Design and Manufacturing

Magna Mirror Systems is one of the world's most completely integrated mirror manufacturers and one of the largest suppliers of power actuators/powerfolds – the electric technology inside the mirror shell that controls the position of the glass on exterior mirrors. The group, which has in-house automated manufacturing and assembly capabilities, is currently developing a suite of new actuator product technologies. In-house actuator manufacturing capability provides greater quality control, design flexibility and cost effectiveness.

Integrated turn signal mirror

Another new technology currently being pioneered by the group is an innovative self-dimming technology for exterior and interior mirrors that provides improved safety during nighttime driving.

Power actuator assembly cell

Decoma International Inc.

Decoma International Inc. is Magna's global exterior systems subsidiary and the world's leading supplier of exterior vehicle appearance systems and modules. The Company designs, engineers and manufactures a wide range of products including plastic body panels, exterior trim components and fascias. Decoma is a separate publicly traded company (NASDAQ: DECAF; Toronto Stock Exchange: DEC.A).

Industry Trends

One of the more significant industry trends in exterior systems during the last few years is the gradual changeover from metal to plastic body panels – particularly on light trucks and SUVs, two of the fastest growing segments of the vehicle market. Decoma is at the forefront of this trend with the use of injection moulding technology to produce large plastic body panels. For example, Decoma supplies the truck side fender on GMC Sierra and Chevrolet Silverado trucks. The fender is one of the largest plastic panels currently in production in the automotive industry. Decoma is working on the development of other, larger exterior body panels using plastic composites to meet increased customer requirements for weight and cost reduction as well as improved fuel economy.

Market Leader

Decoma is the worldwide market leader in the production of automotive fascias. Decoma supplies front and

Audi TT hard top

rear fascias for a number of the world's best selling and most prestigious vehicles, including the Cadillac DeVille, Honda Civic, Mercedes-Benz C Class, Audi A8 and DaimlerChrysler PT Cruiser.

New Technologies

Decoma's strong focus on product development led to the launch of a record number of new products last year. In addition, the Company continues to research and develop new and

innovative technologies. One example is chrome-plated thermoplastic olefin (TPO) technology, designed to meet the growing trend toward chrome styling. Chrome-plated TPO material is lighter and less costly than existing materials on the market. Decoma is also perfecting compression moulded long glass fibre technology used in products such as running boards. The glass fibre technology improves structural rigidity and provides weight and cost reduction.

Product Innovation

Decoma is at the forefront of advancing product design and development in vehicle exteriors.

Injection moulded body panel

Window surround

Ford Windstar front end module

Last year, the Company revolutionized the production of vehicle hard tops with the introduction of its breakthrough, all-season hardtop for the Audi TT roadster. This leading-edge Decoma hard top incorporates the interior headliner system, space frame, rear window and sealing system into one large exterior module. The use of strong, lightweight material provides superior crash and rollover protection. The hard top mounts easily, with only four locking points, and is painted by Decoma to match the vehicle's body colour. In addition, Decoma continues to partner with DaimlerChrysler in the development of a moulded plastic hard top made from lightweight, recyclable materials. The ability to produce large moulded hard tops promises to significantly enhance vehicle assembly efficiency.

Customized Exteriors

Decoma is widely recognized by the automotive industry as a leader in creating exterior vehicle customization packages that OEMs can use on production vehicles. At the 2000 Specialty Equipment Market Association (SEMA) show, Decoma won numerous awards for its unique "Woody Street Rod" concept for the DaimlerChrysler PT Cruiser. Personalized vehicle packages such as the "Woody Street Rod" allow OEMs to target niche markets by region and by demographics with proven vehicle customization designs and aftermarket packages. Due to its diverse range of exterior products and advanced design capabilities, Decoma is well-positioned to capitalize on the growing trend to mass customization and niche lifestyle vehicles.

Chrome-plated technology

Modular Systems

Another important trend is product modularization. In the exteriors business, Decoma is a leader in the development of front and rear end modules – large vehicle systems that incorporate a number of different exterior components. The 2001 Ford Windstar features a modified front end module supplied by Decoma. The Windstar front end assembly includes the fascia, energy absorber, lights and bumper beam – all packaged into a single vehicle module that provides improved assembly efficiency and quality. Decoma's highly successful window surround is another example of the Company's leadership in product modularization. The window surround incorporates the window sealing system and exterior plastic trim into a new breakthrough product that offers cost savings, design flexibility and reduced vehicle noise.

Customized exterior package for the DaimlerChrysler PT Cruiser

Cosma is the automotive industry's premier independent metalforming supplier. The group manufactures a comprehensive range of metal body systems, components, assemblies and modules.

Industry Trends

Automakers are increasingly looking to suppliers to reduce overall vehicle weight in order to obtain improved fuel economy and reduced costs. Cosma has been at the forefront of this trend through the manufacture of stronger, lightweight components and systems, as well as through the use of alternate metals such as aluminum and stainless steel.

Cosma is currently working on the leading-edge development of large body panel stampings made from aluminum. The use of aluminum rather

CAD/CAM illustration of metal underbody assemblies and modules on the Ford Escape (shown here) and the Mazda Tribute

Product Innovation

Cosma will continue to use applications of hydroforming technology, which uses water pressure to bend and shape metal, to other types of lightweight metal, including aluminum and stainless steel.

In the area of new alternate material products, Cosma currently supplies an all-aluminum radiator support, carried on the General Motors' GMT800 truck series. The radiator support provides significant cost and weight savings and is made using a metal extrusion process that improves structural strength.

New Technologies

Cosma is currently investigating several new and innovative joining technologies and welding processes, including tube-to-tube welding.

than traditional steel in exterior vehicle body panels promises to dramatically reduce vehicle weight and cost.

Systems Integration

Cosma is adopting a modular systems approach to all of its traditional stamped metal products. The group is developing a number of large metal body assemblies and modules, including front end modules. The new Ford Escape and Mazda Tribute feature

Aluminum front fender stamping

underbody assemblies that integrate many of Cosma's traditional stamping modules, including cross-member assemblies and engine compartment panels.

Lightweight aluminum radiator support

Tesma International Inc. is Magna's global engine, transmission and fuel systems subsidiary. The Company manufactures highly engineered products and modules for vehicle engines, transmissions and fuel systems. Tesma is a separate publicly traded company (NASDAQ: TSM.A; Toronto Stock Exchange: TSM.A).

Industry Trends

Two of the most significant automotive trends in the area of powertrain and refueling systems are the moves to reduce vehicle emissions to meet more stringent regulations, and the accelerated effort to improve fuel economy due to rising fuel prices. Among systems suppliers, Tesma is at the forefront of product development designed to lower fuel emissions.

Transmission oil pump

One of the most significant new engine technologies for improved engine emissions currently under development at Tesma is the camshaft phaser. This engine technology, more commonly used in European and Japanese automobiles, regulates the opening and closing of intake and

Front cover engine module

exhaust valves, resulting in enhanced engine performance and decreased emissions. The camshaft phaser is scheduled to go into production within two years.

New Product Areas

Another new product with significant market potential is Tesma's engine balance shaft assembly. Balance shafts are increasingly being used by North American OEMs to smooth out engine roughness, resulting in reduced vehicle noise, vibration and harshness. Tesma's oil pump, manufactured using proprietary technology, is one of the Company's most highly engineered products. Tesma is looking to aggressively expand its engine and transmission oil pump business in the North American and Asia-Pacific markets.

Product Innovation

Tesma's product development activities are focused on improving the performance of powertrain and fuel systems while at the same time providing cost-competitive solutions. Tesma is working on several key R&D initiatives, including more cost-effective four-wheel-drive and all-wheel-drive clutch systems. During the past year, Tesma established an engineering and project management group to oversee development of various new products, including front cover modules. The module integrates the complete front cover of the engine and a number of related components, including water and oil pumps, tensioners and accessory drive systems, into a one-piece assembly. The front engine cover module provides OEMs with reduced cost, weight and in-house assembly requirements.

Balance shaft assembly

Global Vehicle Content

Many of the world's best selling cars, vans, trucks and sport utility vehicles carry Magna-produced components and systems. Magna's average dollar content per vehicle increased in 2000 as a result of growing market penetration and product diversification.

Audi A8 – Magna supplies the front and rear bumper systems, bodyside mouldings, sun visors and various stampings.

BMW 3 Series – Magna supplies the exterior mirrors, door panels, balance shafts, interior trim components and various stampings.

Cadillac DeVille – Magna supplies the hood latch assembly, front and rear fascias, exterior mirrors and various transmission components.

Ford F250 – Magna supplies the radiator support, water pump pulley, alternator pulley, pedal assembly, latch assemblies, bodyside mouldings, step side fenders and running boards.

DaimlerChrysler Sebring Convertible – Magna supplies the front and rear fascias, rocker panels, hood latch assembly, window regulators and metal underbody stampings and assemblies.

Cadillac Escalade – Magna supplies the full frame assembly, radiator support, liftgate latch assembly, power and manual window regulators, running boards and front and rear fascias.

Chevrolet Avalanche – Magna supplies the full frame assembly, cargo storage system, door latch and handle assemblies, engine oil pump and front end accessory drive tensioner.

Acura MDX – Magna manufactures the seat tracks, front and rear fascias, hood latch, exterior mirrors and alternator pulleys.

Jaguar S-Type – Magna manufactures the instrument panel, door panels, radiator support and various stampings.

Mazda Tribute – Magna supplies the seats, metal underbody stampings and assemblies, front and rear door panels, overhead system, fuel filler door latch, radiator assembly, front and rear fascias and various engine components.

Ford Thunderbird – Magna manufactures the front door latching system, front and rear fascias, rocker moulding and sealing components.

Mercedes-Benz C Class – Magna manufactures the front and rear bumpers, bodyside mouldings, exterior and interior mirrors and interior trim.

Opel Vectra – Magna supplies the front and rear bumpers, bodyside mouldings and sun visors.

DaimlerChrysler PT Cruiser – Magna manufactures the front and rear fascias, upper grille, liftgate latch and encoder and twist axle assembly.

Renault Scenic RX4 – Magna manufactures the manual transmission and power take-off, rear axle gear and propeller shaft.

Land Rover Freelander – Magna supplies the instrument panel, exterior mirrors and intermediate reduction drive.

Toyota Sequoia – Magna supplies the exterior mirrors, actuators, back door moulding, and various metal stampings.

DaimlerChrysler Town & Country – Magna supplies the seats, exterior mirrors, power sliding door latching system, power liftgate module, front and rear fascias, bumper beams, front chromed grille, body claddings, and alternator decoupler.

Magna's Employee Charter

The Magna Employee's Charter

Magna is committed to an operating philosophy which is based on fairness and concern for people. ***It includes these principles:***

Job Security

Being competitive by making a better product for a better price is the best way to enhance job security. Magna is committed to working together with you to help protect your job security. To assist you, Magna will provide:

• **Job Counselling** • **Training** • **Employee Assistance Programs**

A Safe and Healthful Workplace

Magna strives to provide you with a working environment which is safe and healthful.

Fair Treatment

Magna offers equal employment opportunities based on an individual's qualifications and performance, free from discrimination or favouritism.

Competitive Wages and Benefits

Magna will provide you with information which will enable you to compare your total compensation of total wages and total benefits with those earned by employees of your competitors, as well as with other plants in your community. If your total compensation is found not to be competitive, then your wages will be adjusted.

Employee Equity and Profit Participation

Magna believes that every employee should own a portion of the Company.

Communication and Information

Through regular monthly meetings between management and employees and through publications, Magna will provide you with information so that you will know what is going on in your Company and within the industry.

The Hotline

Should you have a problem, or feel the above principles are not being met, we encourage you to call the Hotline or use the self-addressed Hotline Envelopes to register your complaints. You do not have to give your name, but if you do, it will be held in strict confidence. Hotline Counsellors, speaking several languages, will answer your call. Your concern will then be forwarded to the Magna Corporate Employee Relations Department. The Magna Corporate Employee Relations Department is committed to investigate and resolve all concerns or complaints and must report the outcome to the Employee Relations Advisory Board.

Employee Relations Advisory Board

The Employee Relations Advisory Board is a group of people who have proven recognition and credibility relating to humanitarian and social issues. This Board will monitor, advise and ensure that Magna operates within the spirit of the Magna Employee's Charter and the principles of Magna's Corporate Constitution.

Management's Discussion and Analysis of Results of Operations and Financial Condition

(All amounts are in \$U.S. millions unless otherwise noted)

Overview

Fiscal 2000 was another successful year for Magna, one which saw the Company achieve new records in sales, profits and earnings per share. Despite these successes the Company continues to seek ways to enhance its global competitiveness. In this regard, Magna has initiated the consolidation of its operations into major global automotive systems corporations.

Magna has now substantially achieved global scope and critical mass in key vehicle supply areas. Earlier this year the Company expanded the global capabilities of its Decoma International Inc. ["Decoma"] group and subsequently initiated a reorganization that created two new groups – Magna Steyr and Intier Automotive Inc. ["Intier"]. Decoma, which is a separate public company, now incorporates Magna's European exterior plastics operations and all of its exterior trim operations to provide the Company's customers with worldwide exterior systems capabilities. Magna Steyr will capitalize on the Company's unique capability to combine world-calibre chassis and powertrain technologies with leading-edge hydroformed vehicle frames to ultimately create a "chassis-on-wheels" module. Intier will consolidate Magna's interior, seating and closure systems to create a group that can provide total integrated interior solutions to its customers.

This reorganization is part of the Company's ongoing efforts to consolidate operations and strategically align its automotive product groups into "super groups" – standalone systems groups focused on providing large vehicle modules and systems in each key vehicle area. Management believes that this product alignment will help to boost Magna's content on various vehicles while also providing its customers with turnkey solutions for building vehicles much more quickly and cost-effectively. The move toward the creation of worldwide autonomous systems groups is also in keeping with the principles of Magna's decentralized operating philosophy and entrepreneurial culture. At the same time, the Company will continue to foster corporate-wide synergies between the groups, whether wholly owned or publicly traded, and provide overall strategic direction.

Magna heads into fiscal 2001 in a solid position to meet the challenges of the year ahead. Despite the generally anticipated reduction in North American vehicle production during the coming year, Magna is financially strong relative to its competitors. The Company has a healthy balance sheet with little debt, significant cash resources and strong cash flow.

Automotive Outlook

During fiscal 2000, the Company's sales and earnings showed improvements over fiscal 1999. The majority of these improvements came in the first half of fiscal 2000 when North American automotive production volumes were at record levels. First half North American production volumes of 9.6 million units were up 6% over the comparative period in fiscal 1999. However, North American automotive production volumes in the second half of fiscal 2000 of 8.1 million units were down 5% over the comparative period in fiscal 1999. Full year fiscal 2000 North American vehicle production of 17.7 million units was up 1% from fiscal 1999.

European vehicle production of 16.7 million units during fiscal 2000 was also 1% higher than production levels in fiscal 1999. European quarterly production volumes remained stable throughout fiscal 2000 relative to fiscal 1999 production.

Although there can be no certainty as to future levels of production, the Company expects North American vehicle production volumes to approximate 15.9 million units for fiscal 2001 or 10% below fiscal 2000 levels. European vehicle production volumes are expected to approximate 15.9 million units for fiscal 2001 or 5% below fiscal 2000 levels.

Magna increased its average dollar content on North American produced vehicles in fiscal 2000 to an all-time high of \$344. In addition, European dollar content per vehicle remains strong, averaging \$162 during fiscal 2000 despite the significant negative impacts of foreign exchange translation. In addition to its significant dollar content on a wide range of best-selling cars, trucks, minivans and sport utility vehicles, Magna has strong product content on a number of new vehicle launches scheduled for fiscal 2001. Going forward, the Company expects to continue to increase its average dollar content per vehicle in both North America and Europe.

Automotive Production Volumes
[in millions]

Automotive Sales Analysis
Fiscal 2000 [in millions]

Automotive Sales Analysis
Fiscal 1999 [in millions]

Average Dollar Content Per Vehicle

Magna's results are directly affected by the levels of North American and European car and light truck production and its ability to obtain new production contracts. Magna's results are also directly affected by the average exchange rate used to translate the results of its operations having a functional currency other than the U.S. dollar into U.S. dollars. Current factors impacting the automotive industry and the ability to obtain new production contracts from OEM customers include the requirement for suppliers to manufacture and supply more complex systems including modular systems, maintain the financial strength to expand, support and supply OEMs, provide increased engineering, finance customer-owned tooling, effectively manage complete programs, and have full service supplier capabilities, in each case on a global basis. The Company believes that Magna's product diversity and overall capabilities position it to benefit from these factors. As a result of the continued globalization of the automotive industry, increased outsourcing by OEM customers of larger, more complex modules and systems to independent Tier One suppliers and the continuing consolidation of the supplier base, the Company expects continued customer penetration in North America and Europe during fiscal 2001 and beyond.

Foreign Exchange

	Years ended Dec 31,		Change
	2000	1999	
1 Canadian dollar equals U.S. dollars	0.67	0.67	nil
1 Euro equals U.S. dollars	0.92	1.06	- 13%
1 British Pound equals U.S. dollars	1.51	1.62	- 6%

The table above reflects the average foreign exchange rates between the most common currencies in which Magna conducts business and the Company's U.S. dollar reporting currency. Significant changes in the above foreign exchange rates impact the reported U.S. dollar amounts of Magna's sales, expenses and income. Throughout this Management's Discussion and Analysis, reference is made to the impact of foreign exchange on reported U.S. dollar amounts where relevant.

Automotive Sales

	Years ended Dec 31,		
	2000	1999	Change
North American production	\$ 6,111	\$5,423	+ 13%
European production and assembly	2,710	2,802	- 3%
Other automotive	1,278	1,035	+23%
Total automotive sales	\$10,099	\$9,260	+ 9%

Total automotive sales were a record \$10,099 million during fiscal 2000, an increase of 9% or \$839 million over fiscal 1999.

North American production sales during fiscal 2000 increased by 13% or \$688 million over fiscal 1999 to \$6,111 million. This increase was a result of an improvement in Magna's average North American dollar content per vehicle of 12% and a 1% increase in North American production volumes. The increase in dollar content per vehicle reflects new production programs, increased sales at recent start-up facilities, particularly at facilities producing for the GMT 800 program, and the consolidation of additional sales due to the acquisition in October 2000 of the remaining 49% interest in the Conix group joint venture, which operates five fascia moulding and finishing facilities in Canada, the United States, England and Belgium.

OEM production volumes in each of North America and Europe may be impacted by a number of geographic factors, including general economic conditions, interest rates, fuel prices and availability, legislative changes, environmental emission and safety issues and labour and/or trade relations.

Magna's reliance on its OEM customers makes it susceptible to risks generally applicable to industry participants, including the extent of OEM outsourcing in both North America and Europe. The extent of OEM outsourcing is dependent on a number of factors, including the cost, quality and timeliness of external production relative to in-house production by OEMs, technological capability, the degree of unutilized capacity at OEM manufacturing facilities and OEM labour relations.

These increases were partially offset by recent dispositions including the dispositions of Invotronics Manufacturing ["Invotronics"], Powerlasers and Magna's ownership interest in Webasto Sunroofs Inc. ["Webasto"] [hereinafter collectively referred to as the "North American Dispositions"] and sales reductions in fiscal 2000 related to the changeover of the Chrysler minivan program.

European production and assembly sales during fiscal 2000 decreased by 3% or \$92 million from fiscal 1999 to \$2,710 million. This decrease was primarily due to a reduction in reported U.S. dollar sales of \$369 million due to the weakening of the Euro and British Pound each against the U.S. dollar. In addition, a number of dispositions and shutdowns [hereinafter collectively referred to as the "European Dispositions"] decreased sales. These decreases were partially offset by increased sales as a result of new production programs and recent start-up facilities, including sales at the Company's new seating plants, increased assembly sales at Steyr and an increase in European production volumes of 1%. European content per vehicle improved by 8% year over year, excluding the 13% reduction related to the impact of foreign currency translation on European sales.

Other automotive sales, which include tooling and engineering sales, increased by 23% or \$243 million in fiscal 2000 to \$1,278 million. This increase is primarily the result of increased tooling sales due to the Company's continued involvement in new production programs, including further GMT 800 program tooling sales, partially offset by a decrease in reported U.S. dollar sales due to the weakening of the Euro and British Pound each against the U.S. dollar and the disposition during fiscal 2000 of the only remaining non-core business unit related to Magna's acquisition of Steyr in fiscal 1998.

Substantially all of Magna's automotive sales are generated from the sale of automotive parts, components, assemblies, modules and systems, vehicle assembly and related engineering and tooling to North American and/or European OEMs. Approximately 24% and 31% of Magna's consolidated automotive production and assembly sales during fiscal 2000 and 1999, respectively, were in respect of tooling, engineering, assembly and manufactured products supplied for five vehicle types [including approximately 8% and 10% supplied for DaimlerChrysler minivans for fiscal 2000 and 1999, respectively].

Facilities

As of December 31, 2000, Magna had 166 automotive manufacturing facilities [including 4 joint venture facilities], of which 99 are in North America, 62 are in Europe, 2 are in Korea, 2 are in Brazil and 1 is in China, as well as 31 product development and engineering centres. The Company's operations outside of North America and Europe [namely in Korea, Brazil and China] are not considered separate operating segments given their small size relative to Magna's overall operating results.

Gross Margin

	Years ended Dec 31,		
	2000	1999	Change
Gross margin	\$1,835	\$1,601	+15%
Gross margin percentage	18.2%	17.3%	

Gross margin, as a percentage of total automotive sales, for fiscal 2000 was 18.2% compared to 17.3% for fiscal 1999. The increase is primarily attributable to improved performance at a number of divisions but was partially offset by ramp-up costs for new start-ups and production inefficiencies at certain divisions.

Operating Income - Automotive

	Years ended Dec 31,		
	2000	1999	Change
Gross margin	\$1,835	\$1,601	
Less:			
Depreciation and amortization	372	332	
Selling, general and administrative	655	607	
Interest expense, net	13	16	
Equity income	(14)	(17)	
Operating income - automotive	\$ 809	\$ 663	+22%
Selling, general and administrative expenses as a percent of total automotive sales	6.5%	6.5%	

Depreciation and amortization expense in fiscal 2000 increased \$40 million over fiscal 1999 as a result of depreciation at recent start-up facilities and increased depreciation as a result of capital spending. These factors were partially offset by the impact of dispositions and shutdowns and a decrease in reported U.S. dollar depreciation due to the weakening of the Euro and British Pound each against the U.S. dollar.

Selling, general and administrative expenses ["SG&A"] as a percent of total automotive sales was unchanged in fiscal 2000 at 6.5%. SG&A was \$655 million representing an increase of \$48 million over fiscal 1999. The increase in these expenses was principally attributable to recent start-up facilities and other amounts including increased costs to support higher sales levels. These increases were partially offset by a decrease in reported U.S. dollar SG&A due to the weakening of the Euro and British Pound each against the U.S. dollar.

Interest expense (net of interest income) decreased during fiscal 2000 to \$13 million compared to \$16 million in fiscal 1999. The decrease reflects an increase in average net cash balances [excluding Magna Entertainment Corp.], including proceeds on dispositions. This decrease was partially offset by interest expense on the October 2000 issuance by Decoma of \$90 million 9.5% subordinated debentures in connection with the Conix group acquisition, a full year's interest expense in connection with the issue of Euro 100 million subordinated debentures in September 1999 and lower capitalized interest.

Automotive operating income was \$809 million in fiscal 2000 compared to \$663 million for fiscal 1999. The 22% increase in operating income in fiscal 2000 compares favourably to the 9% increase in total automotive sales in fiscal 2000 and reflects the gross margin earned on the higher sales levels, the improved gross margin percentage and reduced interest expense, partially offset by increases in SG&A and depreciation and amortization charges and reduced equity income.

Operating Income - Magna Entertainment Corp.

	Years ended Dec 31,	
	2000	1999
Revenues	\$414	\$187
Costs and expenses	412	183
Operating income - MEC	\$ 2	\$ 4

Magna Entertainment Corp. ["MEC"], one of the largest operators of premier horse racetracks in the United States, acquires, develops and operates horse racetracks and related pari-mutual wagering operations. These racetracks include Santa Anita Park, Golden Gate Fields and Bay Meadows in California, Gulfstream Park in Florida, Remington Park in Oklahoma, Thistledown in Ohio and Great Lakes Downs in Michigan. As a complement to its horse racing business, MEC is exploring the development of media sports wagering operations, including telephone account, interactive television, and internet-based wagering, as well as certain leisure and retail-based real estate projects.

MEC generated revenues of \$414 million and operating income of \$2 million in fiscal 2000. Current year operating income was negatively impacted by severance and other costs associated with the relocation of the Company's head office, delays with respect to the sale of certain non-strategic real estate assets and, to a lesser degree, higher than expected costs at certain racetracks.

Revenues for fiscal 2000 reflect a full year's operations for each of Santa Anita, Gulfstream, Golden Gate, Thistledown and Remington Park and ten months of operations for Great Lakes Downs which was acquired in February 2000. Fiscal 2000 revenues also reflect the operating results of Bay Meadows which was acquired in November 2000. The results for fiscal 1999 reflect a full year's operations for Santa Anita, four months of operations for Gulfstream which was acquired in September 1999, one and a half months of operations for Thistledown and Remington Park which were acquired in November 1999 and three weeks of operations for Golden Gate which was acquired in December 1999.

Fiscal 2000 revenues and operating income were benefitted by \$38 million and \$7 million, respectively, as a result of real estate dispositions. Fiscal 1999 revenues and operating income included \$3 million and \$1 million, respectively, for real estate dispositions.

During fiscal 2000, MEC changed its method of reporting revenues and costs and expenses. MEC now reports wagering revenues before deducting purses, stakes, awards and certain taxes. These amounts are now included in costs and expenses.

Previously, MEC reported wagering revenues net of purses, stakes, awards and certain taxes. All comparative period amounts have been restated on this basis. This change better aligns MEC's method of reporting with that of the methods used by its major competitors.

It is Magna's intention to reduce its ownership in MEC to a minority equity position as market conditions permit. It is expected that this will be accomplished through a combination of secondary sales by Magna of its shares of MEC, and/or treasury shares issued by MEC, in connection with capital markets transactions, acquisitions and/or the investment by strategic partners in MEC.

Magna has undertaken that it will not, for a period of approximately seven years, ending May 31, 2006, without the prior consent of the holders of the majority of Magna's Class A Subordinate Voting Shares:

- (i) make debt or equity investments in MEC or any of its subsidiaries, or otherwise give financial assistance to MEC or any of its subsidiaries; or
- (ii) invest in any non-automotive related businesses or assets other than through its investment in MEC.

Other Income

	Years ended Dec 31,	
	2000	1999
Other Income	\$161	\$ -

During fiscal 2000, the Company realized gains before income taxes of \$36 million on the sale of 4.4 million Class A Subordinate Voting Shares of Tesma International Inc. ["Tesma"], \$94 million on the disposition of Webasto, a joint venture, and \$31 million on the disposition of Invotronics, a wholly owned manufacturing division.

Other Items

	Years ended Dec 31,	
	2000	1999
Income Taxes		
- Operating Income	\$288	\$229
- Other Income	60	-
	\$348	\$229
Minority Interest	26	19
Net Income	\$598	\$419

Magna's effective income tax rate on operating income [excluding equity income] for fiscal 2000 was 36.1% compared to 35.2% in fiscal 1999. The increase in the effective tax rate reflects an increase in losses not benefitted in certain jurisdictions and a greater proportion of income being earned in higher tax rate jurisdictions. These effects were partially offset by recent reductions in the Ontario income tax rate.

Minority interest expense for fiscal 2000 increased by \$7 million over fiscal 1999 to \$26 million. The increase is a result of higher earnings at Tesma and Decoma and an increase in minority interest entitlements at each of Tesma and Decoma. These increases were partially offset by the impact of the acquisition in the latter part of fiscal 1999 of the remaining minority interest in the Company's European body and chassis systems operations ["MATAG"].

Net income increased \$179 million to \$598 million in fiscal 2000, reflecting increased automotive operating income, gains on the sale of Tesma Class A Subordinate Voting Shares and the dispositions of Webasto and Invotronics, all included in other income, partially offset by increased income taxes and minority interest.

Earnings Per Share

	Years ended Dec 31,		
	2000	1999	Change
Earnings per Class A Subordinate Voting or Class B Share			
Basic	\$7.04	\$4.94	+43%
Fully diluted	\$6.34	\$4.63	+37%
Earnings per Class A Subordinate Voting or Class B Share excluding other income			
Basic	\$5.75	\$4.94	+16%
Fully diluted	\$5.26	\$4.63	+14%
Average number of Class A Subordinate Voting and Class B Shares outstanding			
Basic	78.5	78.5	-
Fully diluted	93.3	91.8	+ 2%

On a fully diluted basis, earnings per share for fiscal 2000 were \$6.34 compared to \$4.63 in fiscal 1999. Fully diluted earnings per share improved by \$1.71 including \$1.08 related to the gains on the sale of Class A Subordinate Voting Shares of Tesma and the dispositions of Webasto and Invotronics all included in other income. Fiscal 2000 fully diluted earnings per share before other income were \$5.26 representing a \$0.63 or 14% improvement over fiscal 1999. The average number of fully diluted shares outstanding for fiscal 2000 was 93.3 million shares which was 1.5 million shares or 2% higher than in fiscal 1999. The increase in fully diluted shares outstanding reflects the issuance of additional stock options.

AUTOMOTIVE SEGMENTS

Magna follows a corporate policy of functional and operational decentralization. It conducts its automotive operations through divisions which function as autonomous operating units. As at December 31, 2000, the Company had 166 production facilities and 31 product development and engineering centres.

In fiscal 2000, the Company's global product groups were aggregated according to their capabilities in complete vehicle engineering and assembly versus component and systems manufacturing. The Company's Vehicle and Systems Integration operations, which include SteyrSymatec, provide complete vehicle engineering and assembly capabilities. Magna has positioned this group as a Tier 0.5™ supplier, reflecting capabilities beyond those of a Tier One supplier and closer to those of the OEM customer. The Company's Tier One and Two Automotive Manufacturing operations design, engineer, manufacture and supply components, modules and systems primarily for OEM customers and manufacture and supply components on a Tier Two basis to other Tier One suppliers. The Company's Tier One and Two Automotive Manufacturing operations are generally aligned on a product basis with the corresponding purchasing and engineering groups of Magna's OEM customers. The Company's Tier 0.5™ operations, on the other hand, increasingly deal with complete vehicle level purchasing and engineering personnel at Magna's OEM customers. Each group includes the following products and services:

Tier 0.5™ Vehicle and Systems Integration

- This group, which operates under the name SteyrSymatec, includes the engineering and complete vehicle assembly operations of Steyr in Europe and the operations of Symatec in North America, which is focusing on securing additional key integrator contracts to design, engineer and deliver complete vehicle modules and to assemble niche vehicles on behalf of its OEM customers. This group now operates under

the trade name SteyrSymatec. This group also includes the Company's complete door system division as well as certain engineering facilities, all in Europe.

Tier One and Two Automotive Components Manufacturing

- **Body** – Body products include the Company's metallic body and chassis systems divisions, including divisions producing hydroformed components and assemblies. Body products also include the Company's exterior systems operations comprised of Decoma Exterior Systems [including Decoma, a publicly traded subsidiary of the Company, Decoma Exterior Trim and Bestop] and Magna Exterior Systems. The exterior systems divisions supply plastic and metallic exterior components and systems including fascias, grilles, body panels, trim products, door frames, various exterior mouldings, sealing and greenhouse systems and soft tops for sport utility vehicles.
- **Interiors** – Interiors products include the Company's seating divisions which supply complete seat systems, seat tracks, seat frames, integrated child safety seats and other seating components. Interiors products also include the Company's interior systems divisions which supply instrument panels, cockpit modules, consoles, glove boxes, package trays, overhead systems, door trim panels, automotive carpets, interior panels and other interior components and systems.
- **Powertrain** – Powertrain products include: Tesma, a publicly traded subsidiary of the Company which supplies engine, transmission and fueling systems and components; and Steyr Powertrain, a supplier of four wheel drive and other powertrain components.
- **Other Automotive** – Other automotive products include the Company's closure systems divisions and exterior and interior mirror systems divisions.

The Company's internal financial reports provided to executive management aggregate divisional results on a global product line basis and further aggregate results between its Tier 0.5™ operations and its Tier One and Two Automotive Components Manufacturing operations. The Company's Tier 0.5™ engineering and assembly operations are expected to help grow production sales at the Company's Tier One and Two Automotive Components Manufacturing operations as a result of the Tier 0.5™ group's earlier and closer involvement with complete vehicle level purchasing and engineering personnel at Magna's OEM customers.

The Company's internal financial reports also segment Tier 0.5™ and Tier One and Two operating results between North America and Europe. This segmentation recognizes the different geographic business risks faced by the Company's North American

and European divisions, especially vehicle production volumes in North America and Europe and differences in OEM customer mix, the level of OEM outsourcing and the nature of products/services outsourced and currency risk. Vehicle production volumes in North America and Europe are affected by a number of geographic factors such as general economic conditions, interest rates, fuel prices and availability, legislative changes, environmental emission and safety issues and labour and/or trade relations.

Tier One and Two operating results are further segmented in the Company's internal financial reports between the Company's publicly traded and other operations given that, in the former case, oversight of group management has been delegated to a separate independent board of directors. Publicly traded operations include Decoma, as well as Decoma Exterior Trim and Bestop [in each case the operations are closely co-ordinated with Decoma which owns 40% of each of Decoma Exterior Trim and Bestop at December 31, 2000] and Tesma.

As a result of the above internal reporting structure, automotive operating segments reported in the consolidated financial statements include:

- Tier 0.5™ Vehicle and Systems Integration with Europe and North America reported separately;
- Tier One and Two Automotive Components Manufacturing operations with North America and Europe reported separately; and
- Publicly Traded Tier One and Two Automotive Components Manufacturing operations with North America and Europe reported separately.

Subsequent to December 31, 2000, the Company initiated a reorganization of its operating segments. In January 2001, Decoma purchased Magna Exterior Systems and the remaining 60% of Decoma Exterior Trim owned by Magna. In addition, the Company's Tier One and Two Automotive Manufacturing interiors, seating and closure divisions will be combined to form Intier. Finally, substantially all of the Company's Tier 0.5™ Vehicle and Systems Integration segment will be combined with the Company's Tier One and Two Automotive Manufacturing powertrain businesses, excluding Tesma. This new operating group, called Magna Steyr, will also work with the hydroforming and stamping operations of the Company's Tier One and Two Automotive Manufacturing businesses. It is Magna's intention to establish both Intier and Magna Steyr as separate subsidiary public companies. As a result of this reorganization, the Company's reportable operating segments are expected to change in fiscal 2001.

Automotive segment operating results were as follows:

	Year ended Dec 31, 2000		Year ended Dec 31, 1999	
	Total Sales	Operating Income (Loss)	Total Sales	Operating Income (Loss)
Tier 0.5™ Vehicle and Systems Integration				
Europe	\$ 1,036	\$ 74	\$ 1,136	\$ 73
North America	14	(26)	—	(22)
Tier One and Two Automotive Manufacturing

Automotive Segments

Sales - Fiscal 2000

(in millions)

Operating Income - Fiscal 2000

(in millions)

Sales - Fiscal 1999

(in millions)

Operating Income - Fiscal 1999

(in millions)

The Tier 0.5™ Vehicle and Systems Integration segment generated total sales of \$1,050 million in fiscal 2000. Substantially all of these sales were generated in Europe as the Tier 0.5™ North American operation's first significant integration contract for Ford will generate sales in fiscal 2001. The decrease in European sales in fiscal 2000 is primarily the result of a decrease in reported U.S. dollar sales due to the weakening of the Euro against the U.S. dollar and the disposition during fiscal 2000 of the only remaining non-core business related to Magna's acquisition of Steyr during fiscal 1998. These decreases were partially offset by increased assembly and sequencing sales at Steyr.

Magna's Tier 0.5™ Vehicle and Systems Integration segment generated operating income of \$48 million in fiscal 2000 including \$74 million of income in Europe offset by \$26 million of losses in North America. North American losses reflect design and engineering and start-up costs on SteyrSymatec's first significant integration project for Ford. European operating profits were substantially unchanged. Year over year improvements in European operating profits were realized due to the disposition during fiscal 2000 of the only remaining non-core business related to Magna's acquisition of Steyr during fiscal 1998, which incurred losses in fiscal 1999, and reduced interest expense. These improvements were offset by additional expenses in fiscal 2000, including start-up costs incurred in connection with a new engineering and assembly contract for SAAB and a decrease in reported U.S. dollar operating profit, principally due to the weakening of the Euro against the U.S. dollar.

The Tier One and Two Automotive Components Manufacturing segment generated total sales of \$7,194 million in fiscal 2000 including North American and European sales of \$5,119 million and \$2,075 million, respectively. The increase in North American sales reflects increased production and tooling sales at recent start-up facilities, including facilities producing for the GMT 800 program, recent new program launches and higher vehicle production volumes. These increases were partially offset by the impact of the North American Dispositions and sales reductions related to the changeover of the Chrysler minivan program. European sales increases, primarily related to sales at recent start-up facilities, including sales at the Company's new seating plants, new program launches and higher vehicle production volumes, were substantially offset by a decrease in reported U.S. dollar sales due to the weakening of the Euro and British Pound each against the U.S. dollar and the impact of the European Dispositions.

Magna's Tier One and Two Automotive Component Manufacturing segment generated operating income in fiscal 2000 of \$424 million in North America and \$13 million in Europe. North American operating income improved by \$44 million over fiscal 1999 primarily due to increased contributions from certain start-up facilities, including facilities producing for the GMT 800 program, contributions from new program launches and improved performance at certain divisions. The North American Dispositions, which in aggregate incurred losses in fiscal 1999, also contributed to the year over year improvement in earnings. These increases were partially offset by increased interest and royalties paid to the corporate office, as well as operational inefficiencies at certain start-up and other divisions. European operating income improved by \$15 million over fiscal 1999 due in part to increased contributions from certain start-up facilities, the impact of the European Dispositions, which in aggregate incurred losses in fiscal 1999, increased production volumes, improved performance at certain divisions and recoveries related to prior Rover production volume issues. These increases were partially offset by closure costs related to a facility in Spain, costs incurred related to a customer start of production delay, costs incurred for new program launches, the ramp up of new facilities and inefficiencies at certain European divisions.

The Publicly Traded Tier One and Two Automotive Component Manufacturing segment generated total sales of \$2,015 million in fiscal 2000 including North American and European sales of \$1,852 million and \$163 million, respectively. North American sales during fiscal 2000 were benefitted by the consolidation of additional sales due to Decoma's acquisition in October 2000 of the remaining 49% interest in the Conix group joint venture, the ramp-up of production at a number of Decoma facilities, as well as new product and production program launches by Tesma. European sales for fiscal 2000 also benefitted from the Conix group acquisition and other content increases, but were largely offset by declines due to a decrease in reported U.S. dollar sales as a result of the weakening of the Euro and British Pound each against the U.S. dollar.

Magna's Publicly Traded Tier One and Two Automotive Component Manufacturing segment generated operating income in fiscal 2000 of \$172 million and \$9 million in North America and Europe, respectively. North American profits for fiscal 2000 benefitted from the previously described increases in sales but were partially offset by inefficiencies at certain divisions. European operating profits for fiscal 2000 were substantially unchanged from fiscal 1999.

Corporate and other operating income of \$143 million increased \$40 million over fiscal 1999. The increase is primarily attributable to increased affiliation fees, which are based on North American operating divisions' sales and profits and increased interest and royalty income from the North America Tier One and Two Automotive Manufacturing segment.

The sales amounts in the segmented discussion above are before intersegment eliminations.

FINANCIAL CONDITION, LIQUIDITY AND CAPITAL RESOURCES

Cash Flow from Operations

	Years ended Dec 31,		
	2000	1999	Change
Net Income	\$598	\$ 419	
Items not involving			
current cash flows	393	373	
	\$991	\$792	+25%
Investments in non-cash			
working capital	(336)	(79)	
Cash provided from			
operating activities	\$655	\$ 713	- 8%

During fiscal 2000, cash flow from operations before changes in non-cash working capital increased by \$199 million over fiscal 1999 to \$991 million. The increase was attributable to increases in net income of \$179 million and an increase in other non-cash items of \$20 million representing increased depreciation and amortization, minority interest expense and other non-cash charges, partially offset by disposition gains. Cash invested in non-cash working capital during fiscal 2000 amounted to \$336 million. Working capital levels increased in fiscal 2000 due to: (i) an increase in days in production receivables due to the ramp up of new programs and the timing of related customer collections; (ii) higher tooling inventory investments; (iii) a decrease in accounts payable to tooling suppliers largely related to the GMT 800 program; and (iv) other working capital investments. Overall cash flow from operations for fiscal 2000 was \$655 million, representing a decrease of \$58 million or 8% from fiscal 1999.

Capital and Investment Spending

	Years ended Dec 31,	
	2000	1999
Fixed assets, investments and other additions	\$ (681)	\$(885)
Purchases of subsidiaries	(68)	(211)
Proceeds from disposals	346	146
Cash used for investing activities	\$(403)	\$(950)

Fixed assets, investments and other additions totalled \$681 million for fiscal 2000 compared to \$885 million for fiscal 1999.

Fiscal 2000 purchases of subsidiaries reflect Decoma's acquisition of the remaining 49% interest in the Conix joint venture for \$43 million [the total purchase price, net of cash acquired, was \$133 million, however, the issuance by Decoma of \$90 million 9.5% subordinated debentures to the vendor represents a non-cash item and has been excluded from the statement of cash flows] and MEC's acquisition of Bay Meadows for \$24 million. Fiscal 1999 purchases of subsidiaries represent the Company's acquisition of the remaining 40% interest in MATAG for \$45 million, Tesma's purchase of Hanwha Automotive Components Corporation for \$5 million and the acquisitions by MEC of Gulfstream Park, Thistledown, Remington Park, Golden Gate Fields and San Luis Rey Downs for total cash consideration of \$161 million.

Fiscal 2000 proceeds from asset disposals include proceeds on the sale of Class A Subordinate Voting Shares of Tesma, proceeds from the dispositions of Powerlasers, Webasto, Invotronics, MEC real estate and proceeds from normal course fixed and other asset dispositions.

Financing

	Years ended Dec 31,	
	2000	1999
Net issues (repayments) of debt	\$ (80)	\$ 144
Repayments of debentures' interest obligations	(33)	(30)
Preferred Securities distributions	(26)	(3)
Issues of shares by subsidiaries	4	1
Surrender of subsidiary stock options	(2)	—
Issue of 7.08% Subordinated Debentures	—	104
Issue of Preferred Securities	—	274
Dividends paid to minority interests	(6)	(3)
Dividends	(97)	(87)
Cash provided from (used for)		
financing activities	\$(240)	\$400

Net repayments of debt, including bank indebtedness and long-term debt, totalled \$80 million in fiscal 2000. The increase in Preferred Securities distributions in fiscal 2000 reflects a full year's distribution on the Series A and B Preferred Securities issued in September 1999.

Dividends Declared Per Share

Dividends

	Years ended Dec 31,		
	2000	1999	Change
Dividends paid per Class A Subordinate Voting and Class B Share	\$1.24	\$1.11	+12%

Dividends paid during fiscal 2000 were \$1.24 per Class A Subordinate Voting and Class B Share, totalling \$97 million. This represents a 12% increase over fiscal 1999. These payments relate to dividends declared in respect of the three month periods ended September 30, June 30, and March 31, 2000 and December 31, 1999.

Dividends paid in respect of fiscal 2000 increased 22% over dividends paid in respect of fiscal 1999.

Financing Resources

Magna's wholly owned automotive operations had cash of \$398 million at December 31, 2000. Magna's wholly owned automotive operations also had unused and available operating and term credit facilities totalling \$515 million. The Company's non-wholly owned automotive operations and MEC had cash of \$222 million and unused and available operating and term credit facilities of \$138 million at December 31, 2000.

Capital and investment spending for existing businesses and projects, including wholly owned and non-wholly owned automotive operations and MEC, is expected to range between \$725 million and \$775 million for fiscal 2001, of which approximately \$50 million relates to MEC. The majority of fiscal 2000 and fiscal 2001's automotive capital spending relates to the award of new production contracts, new production facilities, maintenance improvements and planned efficiency enhancements. Management believes Magna is in a position to meet all fiscal 2001 planned cash requirements from its cash balances on hand, existing credit facilities and cash flow from operations. Cash flow from operations totalled \$655 million and \$713 million in fiscal 2000 and fiscal 1999, respectively.

Foreign Currency Activities

Magna's North American operations negotiate sales contracts with North American OEMs for payment in both U.S. and Canadian dollars. Materials and equipment are purchased in various currencies depending upon competitive factors, including relative currency values. The North American operations use labour and materials, which are paid for in both U.S. and Canadian dollars.

Magna's European operations negotiate sales contracts with European OEMs for payment principally in Euro, certain legacy currencies which are fixed against the Euro, and the British Pound. The European operations' material, equipment and labour are paid for principally in Euro, certain legacy currencies and the British Pound.

Magna employs hedging programs, primarily through the use of foreign exchange forward contracts, in an effort to manage the foreign exchange exposure which arises when manufacturing facilities have committed to the delivery of products for which the selling price has been quoted in foreign currencies. These commitments represent contractual obligations by Magna to deliver products over the duration of the product programs which can last for a number of years. The amount and timing of the forward contracts will be dependent upon a number of factors, including anticipated production delivery schedules and anticipated production costs, which may be paid in the foreign currency. Despite these measures, significant long-term fluctuations in relative currency values, in particular a significant change in the relative values of the U.S. dollar, Canadian dollar, Euro and certain legacy currencies (particularly the German Deutschmark and Austrian Schilling), or the British Pound, could affect Magna's results of operations.

ACCOUNTING POLICY CHANGES

In September 1999, the United States Emerging Issues Task Force reached a consensus on Issue 99-5 on accounting for pre-production costs related to long-term supply agreements. The consensus requires that design and development costs, for products to be sold under long-term supply agreements, be expensed as incurred unless a contractual guarantee for reimbursement exists. The consensus also requires that design and development costs for moulds, dies and other tools that a supplier will not own and that will be used in producing the products under the long-term supply

agreement be expensed as incurred unless the supply arrangement provides a contractual guarantee for reimbursement or the supplier has the non-cancelable right to use the moulds, dies and other tools during the supply arrangement. Canadian GAAP does not explicitly address these types of costs.

In addition, in April 1998, the American Institute of Certified Public Accountants issued new recommendations for accounting for the costs of start-up activities. These recommendations require costs of start-up activities to be expensed as incurred. Under Canadian GAAP, costs incurred in establishing new facilities which require substantial time to reach commercial production capability ["start-up costs"] may be capitalized.

As previously disclosed, the Company has changed its Canadian GAAP accounting policies for preproduction costs. The Company now:

- expenses start-up costs as incurred;
- expenses design and engineering costs, which are paid for as part of subsequent related parts production piece price amounts, as incurred unless a contractual guarantee for reimbursement exists; and
- expenses design and development costs for moulds, dies and other tools [that the Company does not own and that will be used in, and paid for as part of the piece price amounts for, subsequent related parts production] as incurred unless the supply agreement provides a contractual guarantee for reimbursement or the non-cancelable right to use the moulds, dies and other tools during the supply arrangement.

These Canadian GAAP policy changes have been applied retroactively with restatement of all periods presented.

The retroactive changes to the consolidated statements of income are as follows:

	Year ended December 31, 1999	Five month period ended December 31, 1998	Year ended July 31, 1998
Increase in cost of sales	\$ 37	\$ 41	\$ 53
Decrease in depreciation and amortization	(22)	(6)	(8)
Decrease in operating income - automotive	\$ (15)	\$ (35)	\$ (45)
Decrease in income taxes	(4)	(12)	(16)
Decrease in net income	\$ (11)	\$ (23)	\$ (29)
Decrease in earnings per Class A			
Subordinate Voting or Class B Share:			
Basic	\$(0.14)	\$(0.29)	\$(0.41)
Fully diluted	\$(0.12)	\$(0.25)	\$(0.35)

Contingencies

From time to time, the Company may be contingently liable for litigation and other claims. Refer to note 18 of the Company's consolidated financial statements.

Forward-Looking Statements

The previous discussion contains statements which, to the extent that they are not recitations of historical fact, constitute "forward-looking statements" within the meaning of Section 21E of the Securities Exchange Act of 1934. The words "estimate", "anticipate", "believe", "expect", and similar expressions are intended to identify forward-looking statements. Such forward-looking information involves important risks, assumptions and uncertainties that could materially alter results in the future from those expressed in any forward-looking statements made by, or on behalf of, Magna. These risks, assumptions and uncertainties include, but are not limited to, industry cyclicalities, trade and labour disruptions, pricing concessions and cost absorptions, dependence on certain vehicles and major OEM customers, currency exposure, technological developments by Magna's competitors, government and regulatory policies and changes in the economy and competitive environment in which Magna operates. Persons reading this Management's Discussion and Analysis of Results of Operations and Financial Condition are cautioned that such statements are only predictions and that actual events or results may differ materially. In evaluating such forward-looking statements, readers should specifically consider the various factors which could cause actual events or results to differ materially from those indicated by such forward-looking statements.

Management's Responsibility for Financial Reporting

Magna's management is responsible for the preparation and presentation of the consolidated financial statements and all the information in this Annual Report. The consolidated financial statements were prepared by management in accordance with accounting principles generally accepted in Canada. Where alternative accounting methods exist, management has selected those it considered to be most appropriate in the circumstances. Financial statements include certain amounts based on estimates and judgements. Management has determined such amounts on a reasonable basis designed to ensure that the consolidated financial statements are presented fairly, in all material respects. Financial information presented elsewhere in this Annual Report has been prepared by management to ensure consistency with that in the consolidated financial statements. The consolidated financial statements have been reviewed by the Audit Committee and approved by the Board of Directors of Magna.

Management is responsible for the development and maintenance of systems of internal accounting and administrative cost controls of high quality, consistent with reasonable cost. Such systems are designed to provide reasonable assurance that the financial information is accurate, relevant and reliable and that the Company's assets are appropriately accounted for and adequately safeguarded.

The Company's Audit Committee is appointed by its Board of Directors annually and is comprised solely of outside directors. The Committee meets periodically with management, as well as with the independent auditors, to satisfy itself that each is properly discharging its responsibilities, to review the consolidated financial statements and the independent auditors' report and to discuss significant financial reporting issues and auditing matters. The Audit Committee reports its findings to the Board of Directors for consideration when approving the consolidated financial statements for issuance to the shareholders.

The consolidated financial statements have been audited by Ernst & Young LLP, the independent auditors, in accordance with auditing standards generally accepted in Canada and the United States on behalf of the shareholders. The Auditors' Report outlines the nature of their examination and their opinion on the consolidated financial statements of the Company. The independent auditors have full and unrestricted access to the Audit Committee.

Auditors' Report

To the Shareholders of Magna International Inc.

We have audited the consolidated balance sheets of **Magna International Inc.** as at December 31, 2000 and 1999 and the consolidated statements of income and retained earnings and cash flows for the years ended December 31, 2000 and 1999, the five month period ended December 31, 1998 and the year ended July 31, 1998. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in Canada and the United States. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2000 and 1999 and the results of its operations and its cash flows for the years ended December 31, 2000 and 1999, the five month period ended December 31, 1998 and the year ended July 31, 1998 in accordance with accounting principles generally accepted in Canada.

Ernst & Young LLP
Chartered Accountants

*Toronto, Canada,
February 20, 2001.*

Basis of Presentation

Magna International Inc. changed its fiscal year end from July 31 to December 31, effective December 31, 1998.

The revenues and expenses of the Company's non-automotive group, Magna Entertainment Corp. ["MEC"], have been separately presented in the consolidated statements of income for the years ended December 31, 2000 and 1999. Prior to the year ended December 31, 1999, MEC revenues and expenses were not significant.

The consolidated financial statements have been prepared in U.S. dollars following accounting principles generally accepted in Canada ["Canadian GAAP"], which are in conformity, in all material respects, with accounting principles generally accepted in the United States ["U.S. GAAP"], except as described in note 21 to the consolidated financial statements.

Principles of Consolidation

The consolidated financial statements include the accounts of Magna International Inc. and its subsidiaries [collectively "Magna" or the "Company"], some of which have a minority interest. The Company accounts for its interests in jointly controlled entities using the proportionate consolidation method. All significant inter-company balances and transactions have been eliminated.

Reporting Currency

In order to more fully reflect the global nature of the Company's business and to improve investors' ability to compare the Company's results with those of most other publicly traded businesses in the automotive industry, the U.S. dollar was adopted as the Company's reporting currency effective December 31, 1998. In accordance with accounting principles generally accepted in Canada, for periods up to and including December 31, 1998, the consolidated financial statements and notes thereto were restated in U.S. dollars using the December 31, 1998 exchange rate of Cdn\$1.5305 per U.S.\$1.00. The functional currencies of each of the Company's operations were unchanged.

For periods up to and including December 31, 1998, the assets and liabilities of the Company's operations having a functional currency other than the Canadian dollar were translated into Canadian dollars using the exchange rate in effect at the period end and revenues and expenses were translated at the average rate during the period. Exchange gains or losses on translation of the Company's net equity investment in these operations were deferred as a separate component of shareholders' equity.

For years after December 31, 1998, the assets and liabilities of the Company's operations having a functional currency other than the U.S. dollar are translated into U.S. dollars using the exchange rate in effect at the year end and revenues and expenses are translated at the average rate during the year. Exchange gains or losses on translation of the Company's net equity investment in these operations are deferred as a separate component of shareholders' equity.

The appropriate amounts of exchange gains or losses accumulated in the separate component of shareholders' equity are reflected in income when there is a reduction in the Company's net investment in the operations that gave rise to such exchange gains and losses.

Foreign exchange gains and losses on transactions occurring in a currency other than an operation's functional currency are reflected in income except for gains and losses on foreign exchange contracts used to hedge specific future commitments in foreign currencies. Gains and losses on these contracts are accounted for as a component of the related hedged transaction. Gains and losses on translation of foreign currency long-term monetary liabilities are deferred and amortized over the period to maturity.

Cash and Cash Equivalents

Cash and cash equivalents include cash on account, demand deposits and short-term investments with remaining maturities of less than three months at acquisition.

Inventories

Inventories are valued at the lower of cost and net realizable value, with cost being determined substantially on a first-in, first-out basis. Cost includes the cost of materials plus direct labour applied to the product and the applicable share of manufacturing overhead.

Investments

The Company accounts for its investments in which it has significant influence on the equity basis.

Fixed Assets

Fixed assets are recorded at historical cost which includes acquisition and development costs. Development costs include direct construction costs, interest capitalized on construction in progress and land under development and indirect costs wholly attributable to development.

Depreciation is provided on a straight-line basis over the estimated useful lives of fixed assets at annual rates of 2 1/2% to 5% for buildings, 7% to 10% for general purpose equipment and 10% to 30% for special purpose equipment.

Costs incurred in establishing new facilities which require substantial time to reach commercial production capability are expensed as incurred. [See note 2.]

Goodwill

Goodwill represents the excess of the purchase price of the Company's interest in subsidiary companies over the fair value of the underlying net identifiable assets arising on acquisitions. Goodwill is generally amortized over 20 years and in all cases amortization does not exceed 40 years. The Company reviews the valuation and amortization periods of goodwill whenever events or changes in circumstances warrant such a review. In doing so, the Company evaluates whether there has been a permanent impairment in the value of unamortized goodwill based on the estimated undiscounted cash flows of each business to which the goodwill relates.

Racing Licenses

Other assets include racing licenses. Racing licenses are recorded at cost less accumulated amortization. Amortization is provided on a straight-line basis over 20 years, representing the estimated useful lives of such racing licenses.

Subordinated Debentures

The Company's subordinated debentures are recorded in part as debt and in part as shareholders' equity.

The debt component consists of the present value of the future interest payments on the subordinated debentures to maturity and is presented as debentures' interest obligation. Interest on the debt component is accrued over time and recognized as a charge against income.

The equity component includes the present value of the principal amount of the subordinated debentures which can be satisfied by issuing Class A Subordinate Voting Shares of the Company at the option of the Company. This amount will be accreted to the face value of the subordinated debentures over the term to maturity through periodic charges, net of income taxes, to retained earnings.

In addition, in the case of the convertible subordinated debentures, the equity component also includes the value of the holder's option to convert the convertible subordinated debentures into Class A Subordinate Voting Shares of the Company. The holders' conversion options are valued using a residual value approach.

Each of the above equity components are included in other paid-in capital in shareholders' equity except for the equity component of subordinated debentures issued by the Company's subsidiary, Decoma International Inc. ["Decoma"]. The equity component of this subordinated debenture is included in minority interest.

Preferred Securities

Preferred Securities are included in shareholders' equity and financing charges, net of income taxes, on the Preferred Securities are accrued over time and charged directly to retained earnings.

Revenue Recognition

Revenue from the sale of manufactured products is recognized when measurable, upon shipment to [or receipt by customers depending on contractual terms], and acceptance by, customers.

Revenues from separately priced engineering service and tooling contracts are recognized on a percentage of completion basis.

Revenue and cost of sales are presented on a gross basis in the consolidated statements of income when the Company is acting as principal and is subject to significant risks and rewards in connection with the process of bringing the product to its final state and in the post sale dealings with its customers. Otherwise, components of revenues and related costs are presented on a net basis.

Preproduction Costs Related to Long-term Supply Agreements

Costs incurred [net of customer subsidies] related to design and engineering, which are paid for as part of subsequent related parts production piece price amounts, are expensed as incurred unless a contractual guarantee for reimbursement exists.

Costs incurred [net of customer subsidies] related to design and development costs for moulds, dies and other tools that the Company does not own [and that will be used in, and paid for as part of the piece price amount for, subsequent related parts production] are expensed as incurred unless the supply agreement provides a contractual guarantee for reimbursement or the non-cancelable right to use the moulds, dies and other tools during the supply agreement. [See note 2.]

Government Financing

The Company makes periodic applications for financial assistance under available government assistance programs in the various jurisdictions in which the Company operates. Grants relating to

capital expenditures are reflected as a reduction of the cost of the related assets. Grants and tax credits relating to current operating expenditures are generally recorded as a reduction of expense at the time the eligible expenses are incurred. In the case of certain foreign subsidiaries, the Company receives special tax credits, which are accounted for as a reduction of income tax expense. The Company also receives loans which are recorded as liabilities in amounts equal to the cash received.

Research and Development

The Company carries on various applied research and development programs, certain of which are partially or fully funded by governments or by customers of the Company. Funding received is accounted for using the cost reduction approach. Research costs are expensed as incurred and development costs which meet certain criteria where future benefit is reasonably certain are deferred to the extent of their estimated recovery.

Income Taxes

The Company uses the liability method of tax allocation for accounting for income taxes. Under the liability method of tax allocation, future tax assets and liabilities are determined based on differences between the financial reporting and tax bases of assets and liabilities and are measured using the substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse.

Stock-based Compensation

No compensation expense is recognized for stock options granted under the Company's Incentive Stock Option Plan. Consideration paid on the exercise of stock options is credited to capital stock.

Earnings Per Class A Subordinate Voting or Class B Share

Basic earnings per Class A Subordinate Voting or Class B Share are calculated on net income less financing charges on Preferred Securities and other paid-in capital using the weighted average number of Class A Subordinate Voting and Class B Shares outstanding during the year.

Fully diluted earnings per Class A Subordinate Voting or Class B Share are calculated on the weighted average number of Class A Subordinate Voting and Class B Shares that would have been outstanding during the year had all the dilutive options and convertible subordinated debentures been exercised or converted into Class A Subordinate Voting Shares at the beginning of the year, or date of issuance, if later. The earnings applicable to the Class A Subordinate Voting and Class B Shares are increased by the amount of interest, net of applicable taxes, that would have been earned on funds received due to the exercise of the options and by the amount of financing costs, net of applicable taxes, that would have been eliminated due to the conversion of the convertible subordinated debentures.

Use of Estimates

The preparation of the consolidated financial statements in conformity with generally accepted accounting principles requires management to make estimates that affect the amounts reported and disclosed in the consolidated financial statements. Actual results could differ from those estimates.

On behalf of the Board:

Director

Chairman of the Board

Notes to Consolidated Financial Statements

(all amounts in U.S. dollars and all tabular amounts in millions unless otherwise noted)

1. SIGNIFICANT ACCOUNTING POLICIES

The significant accounting policies followed by the Company are set out under "Significant Accounting Policies" preceding these consolidated financial statements.

2. PREPRODUCTION COSTS

In September 1999, the United States Emerging Issues Task Force reached a consensus on Issue 99-5 on accounting for preproduction costs related to long-term supply agreements. The consensus requires that design and development costs, for products to be sold under long-term supply agreements, be expensed as incurred unless a contractual guarantee for reimbursement exists. The consensus also requires that design and development costs for moulds, dies and other tools that a supplier will not own and that will be used in producing the products under the long-term supply agreement be expensed as incurred unless the supply arrangement provides a contractual guarantee for reimbursement or the supplier has the non-cancelable right to use the moulds, dies and other tools during the supply arrangement. Canadian GAAP does not explicitly address these types of costs.

In addition, in April 1998, the American Institute of Certified Public Accountants issued new recommendations for accounting for the costs of start-up activities. These recommendations require costs of start-up activities to be expensed as incurred. Under Canadian GAAP, costs incurred in establishing new facilities which require substantial time to reach commercial production capability ["start-up costs"] may be capitalized.

As previously disclosed, the Company has changed its Canadian GAAP accounting policies for preproduction costs. The Company now:

- *expenses start-up costs as incurred;*
- *expenses design and engineering costs, which are paid for as part of subsequent related parts production piece price amounts, as incurred unless a contractual guarantee for reimbursement exists; and*
- *expenses design and development costs for moulds, dies and other tools [that the Company does not own and that will be used in, and paid for as part of the piece price amounts for, subsequent related parts production] as incurred unless the supply agreement provides a contractual guarantee for reimbursement or the non-cancelable right to use the moulds, dies and other tools during the supply arrangement.*

These Canadian GAAP policy changes have been applied retroactively with restatement of all periods presented.

The retroactive changes to the consolidated statements of income are as follows:

	Year ended December 31, 1999	Five month period ended December 31, 1998	Year ended July 31, 1998
Increase in cost of sales	\$ 37	\$ 41	\$ 53
Decrease in depreciation and amortization	(22)	(6)	(8)
Decrease in operating income - automotive	(15)	(35)	(45)
Decrease in income taxes	(4)	(12)	(16)
Decrease in net income	\$ (11)	\$ (23)	\$ (29)
Decrease in earnings per Class A Subordinate Voting or Class B Share:			
Basic	\$(0.14)	\$(0.29)	\$(0.41)
Fully diluted	\$(0.12)	\$(0.25)	\$(0.35)

The cumulative adjustment to retained earnings at August 1, 1997 as a result of these policy changes was a decrease of \$22 million.

The retroactive changes to the consolidated statements of cash flows are as follows:

	Year ended December 31, 1999	Five month period ended December 31, 1998	Year ended July 31, 1998
OPERATING ACTIVITIES			
Decrease in net income	\$ (11)	\$ (23)	\$ (29)
Decrease in items not involving current cash flows	\$ (26)	\$ (18)	\$ (24)
INVESTMENT ACTIVITIES			
Decrease in fixed asset additions	\$ 14	\$ 13	\$ 21
Decrease in investments and other	\$ 23	\$ 28	\$ 32

The retroactive changes to the consolidated balance sheet are as follows:

	December 31, 1999
Decrease in fixed assets	\$(45)
Decrease in other assets	\$(91)
Decrease in future tax liabilities	\$(45)
Decrease in retained earnings	\$(85)
Decrease in currency translation adjustment	\$ (6)

3. MEC REVENUES AND COSTS AND EXPENSES

During the current year, MEC changed its method of reporting revenues and costs and expenses. MEC now reports wagering revenues before deducting purses, stakes, awards and certain taxes. These amounts are now included in costs and expenses. Previously, MEC reported wagering revenues net of purses, stakes, awards and certain taxes. All comparative period amounts have been restated on this basis.

4. INVENTORIES

Inventories consist of:

	December 31,	
	2000	1999
Raw materials and supplies	\$257	\$225
Work-in-process	98	110
Finished goods	116	113
Tooling and engineering	296	312
	\$767	\$760

Tooling and engineering inventory represents costs incurred on separately priced tooling and engineering services contracts in excess of billed and unbilled amounts included in accounts receivable. Unbilled amounts, net of customer advances, included in accounts receivable totalled \$66 million [December 31, 1999 - \$27 million].

5. FIXED ASSETS

Fixed assets consist of:

	December 31,	
	2000	1999
Cost		
Land	\$ 536	\$ 526
Buildings	1,208	1,188
Machinery and equipment	3,436	3,077
	5,180	4,791
Accumulated depreciation		
Buildings	(248)	(235)
Machinery and equipment	(1,343)	(1,058)
	\$3,589	\$3,498

Included in fixed assets are real estate assets [land and buildings] held by MEC that include properties available for sale with a net book value at December 31, 2000 of \$49 million [December 31, 1999 - \$80 million]. Depreciation has ceased on these properties. Properties available for sale are valued at the lower of cost, which includes acquisition and development costs, and estimated fair value less costs of disposal. The Company evaluates the lower of cost and fair value whenever events or changes in circumstances indicate possible impairment.

Also included in the cost of fixed assets are construction in progress expenditures of \$161 million [December 31, 1999 - \$225 million].

Notes to Consolidated Financial Statements

(all amounts in U.S. dollars and all tabular amounts in millions unless otherwise noted)

6. INCOME TAXES

- [a] In the year ended July 31, 1998, the Company adopted the liability method of tax allocation for accounting for income taxes. The cumulative effect, as at August 1, 1997, of adopting these recommendations was a reduction in future tax liabilities and an increase in retained earnings of \$8 million. There was no material impact on net income in the year of adoption.
- [b] The provision for income taxes differs from the expense that would be obtained by applying Canadian statutory rates as a result of the following:

	Years ended December 31,		Five month period ended December 31,	Year ended July 31,
	2000	1999	1998	1998
Canadian statutory income tax rate	44.0%	44.6%	44.6%	44.6%
Manufacturing and processing profits deduction	(4.5)	(5.8)	(5.9)	(4.6)
Foreign rate differentials	(2.7)	(4.5)	(4.6)	(4.2)
Earnings of equity investees	(0.6)	(1.1)	(1.0)	(1.1)
Gains on sale and issues of shares by subsidiaries	(1.1)	—	—	(2.1)
Other	0.7	1.1	0.8	(0.7)
Effective income tax rate	35.8%	34.3%	33.9%	31.9%

- [c] The details of income before income taxes and minority interest by jurisdiction are as follows:

	Years ended December 31,		Five month period ended December 31,	Year ended July 31,
	2000	1999	1998	1998
Canadian	\$645	\$499	\$151	\$337
Foreign	327	168	29	117
	\$972	\$667	\$180	\$454

- [d] The details of the income tax provision are as follows:

	Years ended December 31,		Five month period ended December 31,	Year ended July 31,
	2000	1999	1998	1998
Current provision:				
Canadian federal taxes	\$132	\$103	\$39	\$ 69
Provincial taxes	76	62	23	42
Foreign taxes	113	80	7	39
	321	245	69	150
Future provision:				
Canadian federal taxes	12	11	(4)	6
Provincial taxes	7	7	(2)	3
Foreign taxes	8	(34)	(2)	(14)
	27	(16)	(8)	(5)
	\$348	\$229	\$61	\$145

- [e] Future income taxes have been provided on temporary differences which consist of the following:

	Years ended December 31,		Five month period ended December 31,	Year ended July 31,
	2000	1999	1998	1998
Tax depreciation in excess of book depreciation	\$ 28	\$ 17	\$ 2	\$ 8
Tax losses benefited	(7)	(27)	(10)	(17)
Other	6	(6)	—	4
	\$ 27	\$ (16)	\$ (8)	\$ (5)

[f] Future tax assets and liabilities consist of the following temporary differences:

	December 31,	
	2000	1999
Assets:		
Tax benefit of loss carryforwards		
Pre-acquisition	\$ 26	\$24
Post acquisition	126	99
Share and convertible subordinated debenture issue costs	3	6
	155	129
Valuation allowance against tax benefit of loss carryforwards		
Pre-acquisition	(18)	(21)
Post acquisition	(41)	(15)
	96	93
Liabilities:		
Tax depreciation in excess of book depreciation	177	139
Other assets book value in excess of tax value	37	36
Other	10	13
	224	188
Net future income taxes	\$128	\$95

- [g]** Income taxes paid in cash were \$267 million for the year ended December 31, 2000 [for the year ended December 31, 1999 - \$192 million; for the five month period ended December 31, 1998 - \$79 million; for the year ended July 31, 1998 - \$119 million].
- [h]** At December 31, 2000, the Company has income tax loss carryforwards of approximately \$153 million which relate to certain foreign subsidiaries, including \$49 million of losses obtained on acquisitions, the tax benefits of which have not been recognized in the consolidated financial statements. Of the total losses, \$85 million expire between 2001 and 2007 and the remainder have no expiry date.
- [i]** Consolidated retained earnings include approximately \$827 million at December 31, 2000 of undistributed earnings of foreign subsidiaries that may be subject to tax if remitted to the Canadian parent company. No provision has been made for such taxes as these earnings are considered to be reinvested for the foreseeable future.

7. DEBT AND COMMITMENTS

- [a]** The Company's long-term debt, which is substantially unsecured, consists of the following:

	December 31,	
	2000	1999
Loans from governments with a weighted average interest rate of approximately 3%, denominated primarily in Euros	\$ 97	\$107
Bank term debt at a weighted average interest rate of approximately 7%, denominated primarily in Euros and U.S. dollars	118	129
Other	99	87
	314	323
Less due within one year	46	70
	\$268	\$253

- [b]** Future principal repayments on long-term debt are estimated to be as follows:

2001	\$ 46
2002	59
2003	77
2004	13
2005	10
Thereafter	109
	\$314

- [c]** At December 31, 2000, the Company has operating lines of credit totalling \$299 million and term lines of credit totalling \$1.1 billion. The Company had outstanding letters of credit in the amount of \$93 million drawn primarily under its term lines of credit. In addition to cash resources of \$620 million, the Company had unused and available operating lines of credit of approximately \$31 million and term lines of credit of approximately \$622 million.
- [d]** Under the terms of the Company's operating and term credit agreements, it is permitted to make use of bankers' acceptances and commercial paper to borrow at effective interest rates which are, from time to time, lower than those charged under the bank lines of credit.

Notes to Consolidated Financial Statements

(All amounts in U.S. dollars and all tabular amounts in millions unless otherwise noted)

[e] Net interest expense (income) includes:

	Years ended December 31,		Five month period ended December 31,	Year ended July 31,
	2000	1999	1998	1998
Interest expense				
Current	\$20	\$22	\$ 5	\$ 9
Long-term	25	28	9	19
	45	50	14	28
Less: Interest capitalized	—	(7)	(3)	(4)
	45	43	11	24
Interest income	(32)	(27)	(12)	(26)
Interest expense (income), net	\$13	\$16	\$(1)	\$(2)

[f] At December 31, 2000, the Company had commitments under operating leases requiring annual rental payments as follows:

2001	\$ 53
2002	44
2003	39
2004	32
2005	29
Thereafter	83
	\$280

For the year ended December 31, 2000, operating lease expense amounted to approximately \$60 million [for the year ended December 31, 1999 - \$59 million; for the five month period ended December 31, 1998 - \$29 million; for the year ended July 31, 1998 - \$46 million].

8. SUBORDINATED DEBENTURES AND PREFERRED SECURITIES

[a] The Company's subordinated debentures and Preferred Securities are presented in the consolidated balance sheets as follows:

	December 31,	
	2000	1999
Debentures' interest obligation	\$ 191	\$208
Minority interest	\$ 69	—
Shareholders' equity:		
Other paid-in capital		
Present value of the face amount of the subordinated debentures	\$ 662	\$ 617
Holders' conversion options	79	79
Issue costs related to equity components	(7)	(7)
Total included in other paid-in capital	734	689
Preferred Securities, net of issue costs	277	277
Total included in shareholders' equity	\$1,011	\$966

[b] The following is a summary of the issued and outstanding subordinated debentures, convertible subordinated debentures and Preferred Securities:

Decoma 9.5% Subordinated Debentures

On October 16, 2000, Decoma issued \$90 million of 9.5% subordinated debentures at par. The subordinated debentures are unsecured, denominated in U.S. dollars and are redeemable at any time at par plus accrued and unpaid interest. Upon their redemption or maturity on October 16, 2003, Decoma may, at its option, satisfy the amounts payable under the subordinated debentures by delivering such number of Decoma Class A Subordinate Voting Shares to a registered trustee for sale to open bidders as required to satisfy the obligation. Interest on the obligation is payable in U.S. dollars on a quarterly basis. The present value of the principal amount of these subordinated debentures is included in Decoma's equity. Accordingly, such amount is classified in minority interest in the Company's consolidated balance sheet.

7.08% Subordinated Debentures

On September 21, 1999, the Company issued Euros 100 million [\$104 million on issue date] of 7.08% junior subordinated debentures at par. The unsecured subordinated debentures, which are denominated in Euros, mature on September 30, 2009. The debentures are not redeemable except in the event of certain adverse changes in tax legislation. Upon maturity, the Company may at its option satisfy the amounts payable by issuing to the holders Class A Subordinate Voting Shares of the Company, based on a weighted average trading price of Class A Subordinate Voting Shares, provided that there is no continuing event of default.

4.875% Convertible Subordinated Debentures

On February 13, 1998, the Company issued \$480 million of 4.875% convertible subordinated debentures at par. The unsecured debentures, which are denominated in U.S. dollars, are convertible at any time at the option of the holders into Class A Subordinate Voting Shares at a conversion price of \$74.27 per share and mature on February 15, 2005. The debentures are redeemable after February 16, 2001 or at any time in the event of certain changes affecting Canadian withholding taxes, at par plus accrued and unpaid interest. Upon redemption or maturity of the debentures, or repurchase in the event of certain changes in control of the Company, the Company may at its option satisfy the amounts payable by issuing to the holders Class A Subordinate Voting Shares of the Company, based on a weighted average trading price of Class A Subordinate Voting Shares, provided that there is no continuing event of default. At December 31, 2000, all debentures remained outstanding.

5% Convertible Subordinated Debentures

On October 17, 1995, the Company issued \$345 million of 5% convertible subordinated debentures at par. The unsecured debentures, which are denominated in U.S. dollars, are convertible at any time at the option of the holders into Class A Subordinate Voting Shares at a conversion price of \$53.04 per share and mature on October 15, 2002. The debentures are redeemable after October 14, 1998 or at any time in the event of certain changes affecting Canadian withholding taxes, at par plus accrued and unpaid interest. Upon redemption or maturity of the debentures, or repurchase in the event of certain changes in control of the Company, the Company may at its option satisfy the amounts payable by issuing to the holders Class A Subordinate Voting Shares of the Company, based on a weighted average trading price of Class A Subordinate Voting Shares, provided that there is no continuing event of default. At December 31, 2000 and 1999, there were debentures with a face value of \$344 million outstanding. (

7.25% Convertible Unsecured Subordinated Debentures

In July 1998, all of the outstanding 7.25% convertible unsecured subordinated debentures, which were to mature on July 5, 2005, were retired primarily in exchange for Class A Subordinate Voting Shares at a conversion price of Cdn\$60.25 per share.

8.65% Series A Preferred Securities and 8.875% Series B Preferred Securities

On September 21, 1999, the Company issued Cdn\$165 million [\$114 million on issue date] of 8.65% Series A Preferred Securities due September 30, 2048 and \$170 million 8.875% Series B Preferred Securities due September 21, 2048. The Series A Preferred Securities, which are denominated in Canadian dollars, and the Series B Preferred Securities, which are denominated in U.S. dollars, are redeemable on or after September 30, 2004 and September 21, 2004, respectively, or in each case at any time in the event of certain adverse changes in tax legislation. Hereafter, the Series A and B Preferred Securities are collectively referred to as the Preferred Securities.

Upon redemption or maturity of the Preferred Securities, the Company may at its option pay the outstanding principal amount plus any accrued and unpaid interest by delivering to the Trustee Class A Subordinate Voting Shares of the Company in which event the holders of the Preferred Securities shall be entitled to receive a cash payment equal to the amount payable on redemption or maturity from the proceeds of sale of such Class A Subordinate Voting Shares by the Trustee on behalf of the Company.

The Company also has the right to defer, at any time, and from time to time, subject to certain conditions, payments of interest on the Preferred Securities by extending the interest payment period for up to 20 consecutive quarterly interest periods. The Company cannot pay or declare dividends on any of its capital stock when interest is being deferred. Interest continues to accrue but does not compound during such deferral periods. The Company may satisfy its obligation to pay deferred interest by delivering to the Trustee Class A Subordinate Voting Shares of the Company in which event the holders of the Preferred Securities shall be entitled to receive a cash payment equal to the deferred interest payable from the proceeds of sale of such Class A Subordinate Voting Shares by the Trustee on behalf of the Company.

The Preferred Securities are unsecured junior subordinated debentures of the Company.

- [C] Fully diluted earnings per share as presented in the consolidated statements of income and retained earnings is calculated based on the number of Class A Subordinate Voting Shares that would be issued if holders of the Company's convertible subordinated debentures exercised their conversion options.

Canadian GAAP also requires disclosure of supplementary fully diluted earnings per share if such amount is lower than fully diluted earnings per share. Supplementary fully diluted earnings per share is calculated based on the number of Class A Subordinate Voting Shares that would be issued in settling the principal amount of the Company's subordinated debentures and Preferred Securities using the Company's share settlement options on redemption or maturity. The number of Class A Subordinate Voting Shares is determined based on the market price of Class A Subordinate Voting Shares at the consolidated balance sheet date. Supplementary fully diluted earnings per share is \$5.58 for the year ended December 31, 2000 [for the year ended December 31, 1999 - \$4.25].

Notes to Consolidated Financial Statements

(all amounts in U.S. dollars and all tabular amounts in millions unless otherwise noted)

9. EMPLOYEE BENEFIT PLANS

Pursuant to labour laws and national labour agreements in certain European countries, the Company is obligated to provide lump sum termination payments to employees on retirement or involuntary termination, and long service payments contingent upon persons reaching a predefined number of years of service.

In addition, a limited number of the Company's European subsidiaries sponsor defined benefit pension and similar arrangements for their employees.

All Austrian lump sum termination and long service payment arrangements are unfunded. In addition, all European defined benefit pension plan and similar arrangements, other than in the United Kingdom, are unfunded. However, certain Austrian subsidiaries hold long-term government securities in connection with their unfunded obligations. Such assets amounted to \$27 million and \$25 million at December 31, 2000 and 1999, respectively, and are included in investments in the Company's consolidated balance sheets.

In addition, through the acquisition of Santa Anita in December 1998, the Company assumed responsibility for a defined benefit pension plan.

During the year ended December 31, 2000, the Company introduced a post retirement medical benefits plan covering eligible employees and retirees. Retirees age 60 or older with ten or more years of service will be eligible for benefits. In addition, existing retirees as at August 1, 2000 that meet the above criteria are also eligible for benefits. Benefits are capped based on years of service.

Prior to the Steyr acquisition in June 1998, the Company did not sponsor any substantial defined benefit pension plan or similar arrangements. Accordingly, a reconciliation of the projected benefit obligation, plan assets, funded status and the components of net periodic benefit cost has not been provided for the year ended July 31, 1998.

The cost of benefits earned by employees under all of the above arrangements is actuarially determined using the projected benefit method pro rated on service and management's best estimate of compensation increases, retirement ages of employees, future termination levels and expected returns on plan assets.

The significant actuarial assumptions adopted in measuring the Company's projected benefit obligations are as follows:

Discount rate	5.5% to 6.0%
Rate of compensation increase	2.5% to 3.5%
Expected return on plan assets	8.0%

	Years ended December 31, 2000	1999	Five month period ended December 31, 1998

10. CAPITAL STOCK

[a] The Company's authorized, issued and outstanding capital stock is as follows:

Preference shares – issuable in series –

The Company's authorized capital stock includes 99,760,000 preference shares, issuable in series. None of these shares are currently issued or outstanding.

Class A Subordinate Voting Shares and Class B Shares –

Class A Subordinate Voting Shares without par value [unlimited amount authorized] have the following attributes:

[i] Each share is entitled to one vote per share at all meetings of shareholders.

[ii] Each share shall participate equally as to dividends with each Class B Share.

Class B Shares without par value [authorized – 1,412,341] have the following attributes:

[i] Each share is entitled to 500 votes per share at all meetings of shareholders.

[ii] Each share shall participate equally as to dividends with each Class A Subordinate Voting Share.

[iii] Each share may be converted at any time into a fully-paid Class A Subordinate Voting Share on a one-for-one basis.

In the event that either the Class A Subordinate Voting Shares or the Class B Shares are subdivided or consolidated, the other class shall be similarly changed to preserve the relative position of each class.

[b] Changes in the Class A Subordinate Voting Shares and Class B Shares for the years ended December 31, 2000 and 1999, for the five month period ended December 31, 1998, and for the year ended July 31, 1998 are shown in the following table [number of shares in the following table are expressed in whole numbers and have not been rounded to the nearest million]:

	Class A Subordinate Voting		Class B	
	Number of shares	Stated value	Number of shares	Stated value
Issued and outstanding at July 31, 1997	70,084,554	\$1,024	1,098,309	\$1

Conversion of 5% convertible subordinated debentures	275	—		
Issued and outstanding at December 31, 1999	77,438,465	1,441	1,097,909	1
Issued under the Dividend Reinvestment Plan	12,688	—		
Issued for cash under the Incentive Stock Option Plan	16,000	1		
Issued and outstanding at December 31, 2000	77,467,153	\$1,442	1,097,909	\$1

Notes to Consolidated Financial Statements

(in millions of U.S. dollars and all tabular amounts in millions unless otherwise noted)

- [c] Under the amended and restated Incentive Stock Option Plan, the Company may grant options to purchase Class A Subordinate Voting Shares to full-time employees, senior officers, outside directors or consultants of the Company. The maximum number of shares that can be reserved for issuance under the plan is 6.0 million shares. The number of unoptioned shares available to be reserved at December 31, 2000 was 4.0 million [December 31, 1999 – 4.2 million]. All options granted are for a term of ten years from the grant date. For periods up to and including December 31, 1998, options vested 12 1/2% on the date of the grant and 12 1/2% in each of the following seven years. Options issued subsequent to 1998 generally vest 20% on the date of the grant and 20% in each of the following four years. All options allow the holder to purchase Class A Subordinate Voting Shares at a price equal to or greater than the market price of such shares at the date of the grant.

The following is a continuity schedule of options outstanding [number of options in the table below are expressed in whole numbers and have not been rounded to the nearest million]:

	Options outstanding		Number of options exercisable
	Number of options	Weighted average exercise price	
Outstanding at July 31, 1997	96,500	Cdn\$62.75	22,500
Granted	210,000	Cdn\$92.43	—
Exercised	(16,100)	Cdn\$62.75	(16,100)
Vested	—	—	65,000
Outstanding at July 31, 1998	290,400	Cdn\$84.21	71,400
Vested	—	—	12,500
Outstanding at December 31, 1998	290,400	Cdn\$84.21	83,900
Granted	1,532,500	Cdn\$77.75	—
Exercised	(8,000)	Cdn\$62.75	(8,000)
Vested	—	—	400,250
Outstanding at December 31, 1999	1,814,900	Cdn\$78.85	476,150
Granted	120,000	Cdn\$75.00	—
Exercised	(16,000)	Cdn\$62.75	(16,000)
Surrendered	(10,000)	Cdn\$75.00	(2,000)
Vested	—	—	411,250
Outstanding at December 31, 2000	1,908,900	Cdn\$78.76	869,400

At December 31, 2000, the outstanding options consist of [number of options in the table below are expressed in whole numbers and have not been rounded to the nearest million]:

	Exercise price	Options outstanding		Number of options exercisable
		Number of options	Remaining contractual life	
Tranche 1	Cdn\$62.75	56,400	5.3	32,400
Tranche 2	Cdn\$92.45	150,000	6.6	75,000
Tranche 3	Cdn\$92.35	60,000	6.6	30,000
Tranche 4	Cdn\$91.50	235,000	8.0	141,000
Tranche 5	Cdn\$83.50	40,000	8.0	24,000
Tranche 6	Cdn\$75.00	1,257,500	7.8	503,000
Tranche 7	Cdn\$75.00	40,000	9.1	36,000
Tranche 8	Cdn\$75.00	60,000	9.3	24,000
Tranche 9	Cdn\$75.00	10,000	9.7	4,000
		1,908,900	8.4	869,400
Weighted average exercise price		Cdn\$78.76		Cdn\$79.58

- [d] The Company has a Dividend Reinvestment Plan whereby shareholders have the option to receive their dividends in the form of Class A Subordinate Voting Shares in lieu of cash.
- [e] The following table presents the maximum number of shares that would be outstanding if all the dilutive instruments outstanding at December 31, 2000 were exercised:

Class A Subordinate Voting Shares and Class B Shares outstanding at December 31, 2000	78.6
5% convertible subordinated debentures [based on holders' conversion option]	6.5
4.875% convertible subordinated debentures [based on holders' conversion option]	6.5
Stock options	1.9
	93.5

The above amounts exclude Class A Subordinate Voting Shares issuable, only at the Company's option, to settle the 7.08% subordinated debentures and Preferred Securities on redemption or maturity. The number of shares issuable is dependent on the trading price of Class A Subordinate Voting Shares at redemption or maturity of the 7.08% subordinated debentures and Preferred Securities.

11. FINANCIAL INSTRUMENTS

[a] Foreign Exchange Contracts

The Company operates globally, which gives rise to a risk that its earnings and cash flows may be adversely impacted by fluctuations in foreign exchange. The Company uses foreign exchange contracts to manage foreign exchange risk from its underlying customer contracts. In particular, the Company uses foreign exchange forward contracts and foreign exchange range forward contracts for the sole purpose of hedging certain of the Company's future committed U.S. dollar and Euro ["€"] outflows and inflows. Gains and losses on these hedging instruments are recognized in the same period as, and as part of, the hedged transaction. The Company does not enter into foreign exchange contracts for speculative purposes.

At December 31, 2000, the Company had outstanding foreign exchange forward contracts representing commitments to buy and sell foreign currencies in exchange for Canadian and U.S. dollars as follows:

Buy (Sell)	For Canadian dollars				For U.S. dollars	
	U.S. dollar amount	Weighted average rate	Euro amount	Weighted average rate	Euro amount	Weighted average rate
2001	\$ 292	1.4828	€ 20	1.4955	€ 29	0.9165
2001	(449)	1.4646	(67)	1.4305	(33)	0.9262
2002	110	1.4537	21	1.4576	35	0.9067
2002	(264)	1.4426	—	—	(2)	1.0914
2003	55	1.4446	12	1.5305	29	0.9187
2003	(117)	1.4840	—	—	—	—
2004	33	1.4514	8	1.6277	20	0.9317
2004	(95)	1.4755	—	—	—	—
2005	16	1.4428	7	1.6582	3	0.9397
2005	(87)	1.4727	—	—	—	—
Thereafter	—	—	27	1.6683	—	—
Thereafter	(16)	1.3862	—	—	—	—
	\$ (522)		€ 28		€ 81	

Based on forward foreign exchange rates as at December 31, 2000 for contracts with similar remaining terms to maturity, the unrecognized net losses relating to the Company's foreign exchange forward contracts are approximately \$14 million. If the Company's forward exchange contracts ceased to be effective as hedges, for example if projected net foreign cash inflows declined significantly, previously unrecognized gains or losses pertaining to the portion of the hedging transactions in excess of projected foreign denominated cash flows would be recognized in income at the time this condition was identified.

[b] Fair Value

The methods and assumptions used to estimate the fair value of financial instruments are described below.

Cash and cash equivalents, accounts receivable, bank indebtedness, accounts payable and accrued liabilities

Due to the short period to maturity of the instruments, the carrying values as presented in the consolidated balance sheets are reasonable estimates of fair value.

Investments

Fair value information is not readily available. However, management believes the market value to be in excess of the carrying value of investments.

Long-term debt and debentures' interest obligation

The fair values of the Company's long-term debt and debentures' interest obligation, based on current rates for debt with similar terms and maturities, are not materially different from their carrying value.

[c] Credit Risk

The Company's financial assets that are exposed to credit risk consist primarily of cash and cash equivalents, accounts receivable and foreign exchange forward contracts.

Cash and cash equivalents which consists of short-term investments, including commercial paper, is only invested in governments and corporations with an investment grade credit rating. Credit risk is further reduced by limiting the amount which is invested in any one government or corporation.

The Company, in the normal course of business, is exposed to credit risk from its customers, substantially all of which are in the automotive industry.

The Company is also exposed to credit risk from the potential default by any of its counterparties on its foreign exchange forward contracts. The Company mitigates this credit risk by dealing with counterparties who are major financial institutions and which the Company anticipates will satisfy their obligations under the contracts.

Notes to Consolidated Financial Statements

(all amounts in U.S. dollars and all tabular amounts in millions unless otherwise noted)

[d] Interest Rate Risk

The Company is not exposed to significant interest rate risk due to the short-term maturity of its monetary current assets and current liabilities. In addition, the Company's exposure to interest rate risk on fixed rate long-term instruments is also reduced given the minimum periods to redemption with respect to the convertible subordinated debentures and Preferred Securities.

12. CURRENCY TRANSLATION ADJUSTMENT

Unrealized translation adjustments, which arise on the translation to U.S. dollars of assets and liabilities of the Company's self-sustaining foreign operations, resulted in an unrealized currency translation loss of \$120 million during the year ended December 31, 2000 [during the year ended December 31, 1999 - loss of \$96 million]. The current year unrealized loss resulted primarily from the weakening of the Euro, British Pound and Canadian dollar against the U.S. dollar.

13. OTHER INCOME

[a] During the year ended December 31, 2000, the Company recognized a gain before income taxes of \$36 million on the sale of 4.4 million Class A Subordinate Voting Shares of Tesma International Inc. ["Tesma"], a publicly traded subsidiary of the Company. The Company also completed the sale of its 50% interest in Webasto Sunroofs Inc., a joint venture, and related real estate and completed the sale of InvoTronics, a wholly-owned manufacturing division. The Company recognized gains before income taxes of \$94 million and \$31 million on these disposals, respectively.

[b] During the year ended July 31, 1998, the Company sold its remaining 20% interest in MST Automotive GmbH ["MST"] and TEMIC Bayern-Chemie Airbag GmbH ["TBCA"] and recognized a gain of \$25 million.

Also during the year ended July 31, 1998, Decoma completed an initial public offering by issuing shares to third parties for aggregate cash consideration, net of share issue expenses, of \$26 million. The Company recognized a gain of \$10 million from its ownership dilution arising from the issue. The gain realized was not subject to income taxes as the issue was completed on a primary basis by Decoma.

14. MEC SPECIAL DIVIDEND

On March 10, 2000, Magna paid a special stock dividend of approximately 20% of MEC's equity to Magna Class A Subordinate Voting and Class B shareholders of record on February 25, 2000 [the "special dividend"]. Dividends include \$111 million related to the special dividend.

In connection with the special dividend, the holders' conversion prices with respect to the Company's 4.875% and 5% convertible subordinated debentures have been adjusted [See note 8]. The conversion price with respect to the 4.875% convertible subordinated debentures was reduced to \$74.27, from \$76.17. Similarly, the conversion price with respect to the 5% convertible subordinated debentures was reduced to \$53.04 from \$54.40.

15. INTERESTS IN JOINTLY CONTROLLED ENTITIES

The following is the Company's combined proportionate share of the major components of the financial statements of the jointly controlled entities in which the Company has an interest [before eliminations]:

Balance Sheets

	December 31,	
	2000	1999
Current assets	\$101	\$197
Long-term assets	49	148
Current liabilities	49	104
Long-term liabilities	52	79

Statements of Income

	Years ended December 31,		Five month period ended December 31,	Year ended July 31,
	2000	1999	1998	1998
Sales	\$668	\$671	\$260	\$517
Cost of goods sold, expenses and income taxes	634	638	249	492
Net income	\$ 34	\$ 33	\$ 11	\$ 25

Statements of Cash Flows

	Years ended December 31,		Five month period ended December 31,	Year ended July 31,
	2000	1999	1998	1998
Cash provided from (used for):				
Operating activities	\$74	\$54	\$16	\$68
Investment activities	(67)	(46)	(18)	(27)
Financing activities	(33)	6	(3)	(30)

The Company's share of equity in jointly controlled entities includes undistributed earnings of \$41 million [December 31, 1999 - \$90 million].

16. DETAILS OF CASH FROM OPERATING ACTIVITIES

[a] Items not involving current cash flows:

	Years ended December 31,		Five month period ended December 31,	Year ended July 31,
	2000	1999	1998	1998
Depreciation and amortization	\$ 372	\$332	\$ 120	\$ 192

Equity income and other	24	11	1	(5)
Minority interest	26	19	5	8
Future income taxes and non-cash portion of current taxes	52	3	—	19
Gains on sale and issues of shares by subsidiaries	(101)	—	—	(35)
	\$ 393	\$373	\$ 126	\$ 179

[b] Changes in non-cash working capital:

	Years ended December 31,		Five month period ended December 31,	Year ended July 31,
	2000	1999	1998	1998
Accounts receivable	\$ (126)	\$ (44)	\$ (289)	\$ (104)
Inventories	(135)	(84)	(20)	(35)
Prepaid expenses and other	(39)	8	(17)	(12)
Accounts payable, accrued salaries and wages and other accrued liabilities	(17)	17	243	32
Income taxes payable	(19)	24	(14)	(2)
	\$ (336)	\$ (79)	\$ (97)	\$ (121)

17. TRANSACTIONS WITH RELATED PARTIES

The Company has agreements with an affiliate of the Chairman of the Board for the provision of business development and consulting services. In addition, the Company has an agreement with the Chairman of the Board for the provision of business development and other services. The aggregate amount expensed under these agreements with respect to the year ended December 31, 2000 was \$28 million [for the year ended December 31, 1999 - \$23 million; for the five month period ended December 31, 1998 - \$9 million; for the year ended July 31, 1998 - \$18 million].

During the year ended December 31, 2000, trusts, which exist to make orderly purchases of the Company's shares for employees either for transfer to the EPSP or to recipients of either bonuses or rights to purchase such shares from the trusts, borrowed up to \$41 million [for the year ended December 31, 1999 - \$18 million; for the five month period ended December 31, 1998 - \$23 million; for the year ended July 31, 1998 - \$31 million] from the Company to facilitate the purchase of Class A Subordinate Voting Shares of the Company. At December 31, 2000, the trusts' indebtedness to the Company, which is included in accounts payable, was \$26 million [December 31, 1999 - \$15 million].

Investments include \$2 million [December 31, 1999 - \$2 million], at cost, in respect of an investment in a company that was established to acquire shares of the Company for sale to employees.

During the year ended December 31, 2000, a subsidiary of the Company purchased from a company associated with members of the family of Mr. F. Stronach, Ms. B. Stronach and Mr. A. Stronach, the Chairman of the Board, Vice-Chairman and Chief Executive Officer, and Vice-President, Business Development, respectively of the Company, approximately 200 acres of land and improvements in Aurora, Ontario for a purchase price of approximately \$11.0 million. In addition, during the year ended December 31, 2000, a subsidiary of the Company sold approximately 3 acres of land and improvements in Aurora, Ontario to the same company associated with members of the family of Mr. F. Stronach, Ms. B. Stronach and Mr. A. Stronach for approximately \$0.2 million.

18. CONTINGENCIES

In November 1997, the Company was sued by KS Centoco Ltd., an Ontario-based steering wheel manufacturer in which the Company has a 23% equity interest, and by Centoco Holdings Limited, the owner of the remaining 77% equity interest in KS Centoco Ltd. On March 5, 1999, the plaintiffs were granted leave to make substantial amendments to the original statement of claim. The amended statement of claim alleges, among other things: (i) breach of fiduciary duty by the Company and two of its subsidiaries; (ii) breach by the Company and two of its subsidiaries of certain of their respective obligations under a binding letter of intent between Centoco Holdings Limited, KS Centoco Ltd. and the Company; (iii) various rights of KS Centoco Ltd. to certain airbag technology in North America pursuant to an exclusive licence agreement, together with an accounting of all revenues and profits resulting from the alleged use by the Company, TRW Inc. and other unrelated third party automotive supplier defendants of such technology in North America; and (iv) a conspiracy by the Company, TRW Inc. and others to deprive KS Centoco Ltd. of the benefits of such airbag technology in North America and to cause Centoco Holdings Limited to sell to TRW Inc. its interest in KS Centoco Ltd. in conjunction with Magna's sale to TRW Inc. of its interest in MST and TBCA. The plaintiffs are seeking, amongst other things, damages of approximately Cdn\$3.5 billion. The Company is currently preparing an amended statement of defence and counter claim and is in the process of bringing a motion to strike certain claims in the plaintiffs' statement of claim.

In October 1998, a class action was filed in the United States District Court, Eastern District of New York naming SDP, an Austrian-based subsidiary of the Company which was acquired in 1998, as a defendant together with one other named Austrian company which is not related to the Company. The plaintiffs claim unspecified compensatory and punitive damages, for an accounting and for restitution, all in relation to unpaid work [forced/slave labour] performed by the plaintiffs for SDP and the other defendant at their facilities in Europe during World War II. Since this action was filed, nine other actions have been filed in District Courts in New York, New Jersey, Maryland and California specifically naming SDP and/or the Company, as the controlling shareholder of SDP, as defendants together with various other defendants. More than 50 similar class actions have been commenced in the United States in the last three years in respect of various activities during World War II related to forced/slave labour. All of these cases involved multiple named defendants in addition to the Company [various other defendants include Ford Motor Company, General Motors Corporation, DaimlerChrysler AG, Bayerische Motoren Werke AG, Siemens AG and other major international companies] and are structured to permit the addition of other Austrian and German companies as defendants in the future. Preliminary motions to dismiss have been filed in three of the ten cases involving the Company and in several other cases involving other defendants. Defendants have been successful on all three of the preliminary motions to dismiss which have been heard to date, all of which have been appealed by the plaintiffs involved. All of the class actions involving slave/forced labour in Germany, including nine of the cases naming SDP and/or the Company, were consolidated before Judge Bassler in the District Court, District of New Jersey by the end of October 2000.

The American, German, Austrian and various other European governments, together with certain international organizations and plaintiff's lawyers, have been involved in discussions regarding the resolution of the forced/slave labour issues which have been raised by these law suits. As a result of the discussions, a \$5.2 billion German remembrance fund has been created which will be funded equally by the German Government and German industry. A similar \$380 million Austrian fund has also been created. Forced/slave labourers will receive payments from these funds in return for which the United States Government is to file Statements of Interest to assist in bringing the slave/forced labour class actions to an end in the United States. The Company has not yet determined whether SDP will voluntarily contribute to any of these funds.

Following the filing of a Statement of Interest by the United States Government with Judge Bassler in the District Court, District of New Jersey, orders for Voluntary Dismissal with Prejudice were entered in November 2000 dismissing most of the class actions, including nine of the ten cases specifically naming SDP and/or the Company. A Statement of Interest is expected to be filed by the United States Government in the tenth case in the Spring of 2001 following finalization of the Austrian slave/forced labour and property funds, after which a voluntary dismissal with prejudice is expected to be filed by the plaintiffs in that case.

The Company intends to vigorously defend these cases. At this time, notwithstanding the early stages of these legal proceedings and the difficulty in predicting final outcomes, management believes that the ultimate resolution of these claims will not have a material adverse effect on the consolidated financial position of the Company.

In addition, in the ordinary course of business activities, the Company may be contingently liable for litigation and claims with customers, suppliers and former employees.

Management believes that adequate provisions are recorded in the accounts where required and when estimable. However, there can be no assurance that the Company will not incur additional expense.

19. BUSINESS ACQUISITIONS

The following acquisitions were accounted for using the purchase method:

Acquisitions in the year ended December 31, 2000

Conix

In October 2000, the Company acquired the remaining 49% minority interests in Conix Canada Inc., Conix Corporation, Conix U.K. Ltd. and Conix Belgium N.V. [collectively the "Conix Group"] for a total purchase price of \$133 million [net of \$7 million of cash acquired]. The Conix Group operates fascia moulding and finishing operations in Canada, the United States, England and Belgium. Of the total consideration, \$43 million was paid in cash and the balance was satisfied through the issuance by Decoma of \$90 million 9.5% subordinated debentures.

MEC

In February 2000, MEC acquired the assets and assumed certain liabilities of Great Lakes Downs, Inc. racetrack in Muskegon, Michigan for a purchase price of \$2 million, payable through the issuance of shares of MEC Class A stock. In November 2000, MEC acquired all of the membership interest and capital stock in Bay Meadows Operating Company, LLC and Bay Meadows Catering, respectively, operators of the Bay Meadows racetrack in California for cash consideration of \$24 million.

The effect of these acquisitions on the Company's consolidated balance sheet was as follows:

Non-cash working capital		\$ 22
Fixed assets		90
Goodwill		68
Other assets		21
Bank indebtedness		(19)
Long-term debt [including portion due within one year]		(18)
Future tax liabilities		(5)
Total purchase price [net of cash acquired]		\$159
Comprised of:		
Cash		\$67
Decoma \$90 million 9.5% subordinated debentures presented as:		
Debentures' interest obligation	\$22	
Minority interest	68	90
MEC Class A stock presented as minority interest		2
		\$159

Acquisitions in the year ended December 31, 1999

MATAG

In September 1999, the remaining 40% minority interest in Magna Automobiltechnik AG ["MATAG"] was purchased by the Company for total cash consideration of \$45 million.

HACC

In January 1999, the Company completed the acquisition of 100% of the outstanding shares of Hanwha Automotive Components Corporation ["HACC"], a South Korean based manufacturer of oil and water pump systems, for cash consideration of \$5 million [net of cash acquired of \$3 million].

MEC

During the year ended December 31, 1999, MEC completed the acquisition of five racetracks. In May 1999, the real estate assets of San Luis Rey Downs, a horse boarding and training center in California, were acquired for cash consideration of \$6 million. In September 1999, MEC acquired Gulfstream Park in Florida for cash consideration of \$81 million [net of cash acquired of \$8 million]. In November 1999, MEC acquired the Thistledown and Remington Park racetracks in Ohio and Oklahoma, respectively, for total consideration of \$19 million [net of cash acquired of \$6 million]. Finally, in December 1999, the acquisition of Golden Gate Fields in California was completed for total consideration of \$84 million [net of cash acquired of \$1 million]. Of the total consideration, \$161 million was paid in cash, \$12 million was paid through the issuance of shares of MEC Class A stock and the balance was satisfied by way of a non-interest bearing promissory note having a discounted value of \$17 million.

Summary of acquisitions in the year ended December 31, 1999

Consideration paid for acquisitions, including the transactions described above, consisted of cash, promissory notes and subsidiary share consideration of \$211 million, \$17 million and \$12 million, respectively. The net effects on the Company's consolidated balance sheet were decreases in non-cash working capital of \$13 million and minority interest of \$23 million, and increases in fixed assets of \$220 million, other assets of \$102 million, goodwill of \$21 million, bank indebtedness and long-term debt of \$29 million and net future tax liabilities of \$85 million.

Acquisitions in the five month period ended December 31, 1998

Steyr

During the five month period ended December 31, 1998, the remaining 6% minority interest in Steyr-Daimler-Puch AG ["SDP"] was purchased by the Company for total cash consideration of \$17 million.

Santa Anita

During December 1998, MEC completed the acquisition of the Santa Anita racetrack and approximately 305 acres of related real estate for \$126 million.

Summary of acquisitions in the five month period ended December 31, 1998

Consideration paid for acquisitions, including the transactions described above, consisted of cash consideration of \$145 million. The net effects on the Company's consolidated balance sheet were a decrease in net working capital of \$1 million, increases in fixed and other assets of \$129 million, an increase in goodwill of \$4 million and a decrease in minority interest of \$13 million.

Notes to Consolidated Financial Statements

(all amounts in U.S. dollars and all tabular amounts in millions unless otherwise noted)

Acquisitions in the year ended July 31, 1998

Decomex

In August 1997, the Company acquired 70% of Decomex Inc. ["Decomex"] for cash consideration of \$18 million. Decomex was formed to purchase the operations and assets of Moldes Para Plastico Ayareb, S.A. de C.V., a Mexican based manufacturer of fascias, grilles and other exterior appearance components.

YMOS

In November 1997, the Company acquired the operations of the YMOS Automotive Group ["YMOS"], a European based manufacturer of exterior and interior components, for cash consideration of \$95 million.

Roltra Morse

In February 1998, all of the outstanding share capital of Roltra Morse S.p.A. ["Roltra Morse"] was acquired by the Company for cash consideration of \$28 million. Roltra Morse is a European and South American based supplier of automotive latches, window regulators, cable systems, door modules and gear shift mechanisms.

Paulisch

In March 1998, the Company purchased all the outstanding share capital and limited partnership interests of Paulisch GmbH & Co. KG ["Paulisch"] for cash consideration of \$17 million. Paulisch manufactures complete seats, seat frames and other seating components for the European automotive industry.

TRIAM

In May 1998, the Company acquired all the outstanding share capital of TRIAM Automotive Inc. ["TRIAM"], a North American based manufacturer of automotive components. Consideration amounted to \$51 million and consisted of cash and the issuance of 629,887 Class A Subordinate Voting Shares of the Company.

Steyr

In June 1998, the Company initially acquired a 66.8% share interest in SDP and the 50% interest in Steyr-Daimler-Puch Fahrzeugtechnik AG & Co. KG not held by SDP [collectively "Steyr"]. Subsequent to the initial acquisition, an additional 27.2% share interest in SDP was purchased. The total cash consideration paid for these transactions was \$248 million [net of cash acquired of \$127 million]. Steyr, an Austrian based company, assembles complete vehicles for OEMs, provides vehicle engineering services and produces a variety of components, including 4-wheel drive transmission systems, for the European automotive industry. SDP also owned businesses outside the Company's core automotive systems operations, certain of which were sold. Business units sold were not significant to the Company. During the year ended December 31, 1999, the Company sold one of these businesses and wound down the operations of a second business. During the year ended December 31, 2000, the Company sold the only remaining non-core business unit. No gains or losses arose on these transactions.

Summary of acquisitions in the year ended July 31, 1998

Consideration paid for acquisitions, including the transactions described above, consisted of cash and share consideration of \$471 million. The net effects on the Company's consolidated balance sheet were a decrease in net working capital of \$8 million and increases in fixed assets of \$604 million, goodwill of \$119 million, debt of \$247 million, future tax assets of \$22 million and minority interest of \$19 million.

Proforma Impact

If the acquisitions and disposals [see note 13] completed during the year ended December 31, 2000 and 1999 occurred on January 1, 1999, the Company's unaudited proforma consolidated sales would have been \$10.7 billion for the year ended December 31, 2000 [1999 - \$9.5 billion] and net income of the Company would have been \$606 million [1999 - \$445 million].

20. SEGMENTED INFORMATION

[a] Magna follows a corporate policy of functional and operational decentralization. It conducts its automotive operations through divisions which function as autonomous operating units. As at December 31, 2000, the Company had 166 production facilities and 31 product development and engineering facilities operating in 18 countries. Divisional operating results and each division's annual business plan and capital spending budget are reviewed by executive management.

In fiscal 2000, the Company's global product groups were aggregated according to their capabilities in complete vehicle engineering and assembly versus component and systems manufacturing. The Company's Vehicle and Systems Integration operations, which include SteyrSymatec, provide complete vehicle engineering and assembly capabilities. Magna has positioned this group as a Tier 0.5™ supplier, reflecting capabilities beyond those of a Tier One supplier and closer to those of the OEM customer. The Company's Tier One and Two Automotive Manufacturing operations design, engineer, manufacture and supply components, modules and systems primarily for OEM customers and manufacture and supply components on a Tier Two basis to other Tier One suppliers. The Company's Tier One and Two Automotive Manufacturing operations are generally aligned on a product basis with the corresponding purchasing and engineering groups of Magna's OEM customers. The Company's Tier 0.5™ operations, on the other hand, increasingly deal with complete vehicle level purchasing and engineering personnel at Magna's OEM customers. Each group includes the following products and services:

Tier 0.5™ Vehicle and Systems Integration

- This group, which operates under the name SteyrSymatec, includes the engineering and complete vehicle assembly operations of Steyr in Europe and the operations of Symatec in North America, which is focusing on securing additional key integrator contracts to design, engineer and deliver complete vehicle modules and to assemble niche vehicles on behalf of its OEM customers. This group also includes the Company's complete door system division as well as certain engineering facilities, all in Europe.

Tier One and Two Automotive Manufacturing

- **Body** – Body products include the Company's metallic body and chassis divisions, including divisions producing hydroformed components and assemblies. Body products also include the Company's exterior systems operations comprised of Decoma Exterior Systems [including Decoma International Inc., a publicly traded subsidiary of the Company, Decoma Exterior Trim and Bestop] and Magna Exterior Systems. The exterior systems divisions supply plastic and metallic exterior components and systems including fascias, grilles, body panels, trim products, door frames, various exterior mouldings, sealing and greenhouse systems and soft tops for sport utility vehicles.
- **Interiors** – Interiors products include the Company's seating divisions which supply complete seat systems, seat tracks, seat frames, integrated child safety seats and other seating components. Interiors products also include the Company's interior systems divisions which supply instrument panels, cockpit modules, consoles, glove boxes, package trays, overhead systems, door trim panels, automotive carpets, interior panels and other interior components and systems.
- **Powertrain** – Powertrain products include Tesma, a publicly traded subsidiary of the Company which supplies engine, transmission and fueling systems and components; and Steyr Powertrain, a supplier of four wheel drive and other powertrain components.
- **Other Automotive** – Other automotive products include the Company's closure systems divisions and exterior and interior mirror systems divisions.

The Company's internal financial reports provided to executive management aggregate divisional results on a global product line basis and further aggregate results between its Tier 0.5™ operations and its Tier One and Two Automotive Manufacturing operations. The Company's Tier 0.5™ engineering and assembly operations are expected to help grow sales at the Company's Tier One and Two Automotive Manufacturing operations as a result of the Tier 0.5™ group's earlier and closer involvement with complete vehicle level purchasing and engineering personnel at Magna's OEM customers.

The Company's internal financial reports also segment Tier 0.5™ and Tier One and Two operating results between North America and Europe. This segmentation recognizes the different geographic business risks faced by the Company's North American and European divisions, especially vehicle production volumes in North America and Europe and differences in OEM customer mix, the level of OEM outsourcing and the nature of products/services outsourced and currency risk. Vehicle volumes in North America and Europe are affected by a number of geographic factors such as general economic conditions, interest rates, fuel prices and availability, legislative changes, environmental emission and safety issues and labour and/or trade relations.

Tier One and Two operating results are further segmented in the Company's internal financial reports between the Company's publicly traded and other operations given that, in the former case, oversight of group management has been delegated to a separate independent board of directors. Publicly traded operations include Decoma International Inc., as well as Decoma Exterior Trim and Bestop [in each case the operations are closely co-ordinated with Decoma International Inc. which owns 40% of each of Decoma Exterior Trim and Bestop at December 31, 2000] and Tesma.

As a result of the above internal reporting structure, automotive operating segments reported in these consolidated financial statements include:

- Tier 0.5™ Vehicle and Systems Integration with Europe and North America reported separately;
- Tier One and Two Automotive Manufacturing operations with North America and Europe reported separately; and
- Publicly Traded Tier One and Two Automotive Manufacturing operations with North America and Europe reported separately.

In addition to the Company's Automotive Operating Segments, the Company has certain non-automotive operations held through its subsidiary, MEC.

Notes:

- (i) Included in MEC operating income for the year ended December 31, 2000 is depreciation and amortization and net interest income of \$20 million and \$nil, respectively [for the year ended December 31, 1999 - \$8 million and \$1 million, respectively; for the five month period ended December 31, 1998 - \$3 million and \$2 million, respectively].
- (ii) Included in Corporate and other operating income are intercompany fees, rent and interest charged to the other automotive segments.

Subsequent to December 31, 2000, the Company initiated a reorganization of its operating segments. In January 2001, Decoma purchased Magna Exterior Systems and the remaining 60% of Decoma Exterior Trim owned by Magna. In addition, the Company's Tier One and Two Automotive Manufacturing interiors, seating and closure divisions will be combined to form Intier Automotive. Finally, substantially all of the Company's Tier 0.5™ Vehicle and Systems Integration segment will be combined with the Company's Tier One and Two Automotive Manufacturing powertrain businesses, excluding Tesma. This new operating group, called Magna Steyr, will also work with the hydroforming and stamping operations of the Company's Tier One and Two Automotive Manufacturing businesses. It is Magna's intention to establish both Magna Steyr and Intier Automotive as separate subsidiary public companies. As a result of this reorganization, the Company's reportable operating segments are expected to change in 2001.

- [b] In the year ended December 31, 2000, sales to the Company's three largest customers amounted to 28%, 22% and 20% [for the year ended December 31, 1999 - 32%, 20% and 18%; for the five month period ended December 31, 1998 - 29%, 18% and 17%; for the year ended July 31, 1998 - 22%, 21% and 15%] of total sales, respectively.

- [c] The following table shows certain information with respect to geographic segmentation:

	Year ended December 31, 2000			Total
	Canada	Europe	United States and Other

21. UNITED STATES GENERALLY ACCEPTED ACCOUNTING PRINCIPLES

The Company's accounting policies as reflected in these consolidated financial statements do not materially differ from U.S. GAAP except for:

- [a] The gain or loss on translation of debt denominated in a currency other than the operation's functional currency is deferred and amortized over the remaining life of the debt. Under U.S. GAAP, the gain or loss on translation is included in income when it arises.
- [b] The Company's subordinated debentures are recorded in part as debt and in part as shareholders' equity. In addition, the Company's Preferred Securities are recorded entirely as shareholders' equity. Under U.S. GAAP, the subordinated debentures and Preferred Securities would be recorded entirely as debt.
- [c] The Company has certain interests in jointly controlled entities which have been proportionately consolidated in the Company's financial statements. For purposes of U.S. GAAP, these interests would be accounted for by the equity method. Net income, earnings per share and shareholders' equity under U.S. GAAP are not impacted by the proportionate consolidation of these interests in jointly controlled entities.
- [d] Design and development costs reimbursed through a subsequent production part piece price are expensed as incurred unless a contractual guarantee for reimbursement exists. Design and development costs for moulds, dies and other tools that the Company does not own [and that will be used in, and paid for as part of the piece price amount for, subsequent production] are also expensed as incurred unless a contractual guarantee for reimbursement exists or the supply agreement provides the non-cancelable right to use the moulds, dies and other tools. These policies were adopted for Canadian GAAP in the year ended December 31, 2000 on a retroactive basis. Under U.S. GAAP, the above policies are applied through a cumulative catch-up adjustment as of January 1, 2000.

Start-up costs are expensed as incurred. This policy was also adopted for Canadian GAAP in the year ended December 31, 2000 on a retroactive basis. Under U.S. GAAP, this policy was applied through a cumulative catch-up adjustment as of August 1, 1997.

- [e] In December 1999, the United States Securities and Exchange Commission issued Staff Accounting Bulletin No. 101 ["SAB 101"], Revenue Recognition in Financial Statements. Effective January 1, 2000, the Company changed its method of accounting under U.S. GAAP for in-house engineering service and tooling contracts provided in conjunction with subsequent assembly or production activities, which are regarded as a single arrangement. Previously, the Company had recognized revenue from these engineering service and tooling contracts on a percentage of completion basis. Under the new accounting method adopted effective January 1, 2000 for U.S. GAAP purposes, the Company recognizes revenue and related cost of sales for these activities over the estimated life of the assembly or production arrangement. The effect of the change on the year ended December 31, 2000 was to decrease net income by \$3 million [\$0.03 per share].

For the year ended December 31, 2000, revenues and expenses under U.S. GAAP are lower by \$61 million and \$58 million, respectively, as a result of this difference between Canadian and U.S. GAAP. The net revenue reduction for the year ended December 31, 2000, includes \$102 million in revenue that was included in the cumulative effect adjustments as of January 1, 2000.

- [f] Under U.S. GAAP, APB Opinion No. 25, when a stock option is repurchased by the Company for a cash payment, the Company must record compensation expense. Under Canadian GAAP, the payment is considered a capital transaction and recorded in retained earnings.
- [g] Effective December 31, 1998, the Company adopted the U.S. dollar as its reporting currency. Prior to this change the Canadian dollar had been used as the Company's reporting currency. Under Canadian GAAP, the Company's consolidated financial statements for all periods presented through December 31, 1998 have been translated from Canadian dollars to U.S. dollars using the exchange rate in effect at December 31, 1998. Under U.S. GAAP, the consolidated financial statements for periods prior to the change in reporting currency must be translated to U.S. dollars using the current rate method, which method uses specific year end or specific annual average exchange rates as appropriate. The significant differences arising from the application of the current rate method to the periods presented are the effects on net income and comprehensive income described in item [h] below and the effects on sales and cost of goods sold. Sales and cost of goods sold under U.S. GAAP were as follows:

	Five month period ended December 31, 1998	Year ended July 31, 1998
Sales	\$3,382	\$6,432
Cost of goods sold	2,822	5,306

[h] The following table presents net income and earnings per share information following U.S. GAAP:

Proforma	\$ 6.39	\$ 4.61	\$ 1.25	\$ 3.75

Earnings per share data after cumulative catch-up adjustments were computed as follows:

	Years ended December 31,		Five month period ended December 31,	Year ended July 31,
	2000	1999	1998	1998
Basic EPS – After cumulative catch-up adjustments				
Net income under U.S. GAAP	\$ 476	\$ 433	\$ 112	\$ 295
Average number of Class A Subordinate Voting and Class B Shares outstanding during the period	78.5	78.5	78.4	71.9
Basic EPS	\$ 6.06	\$ 5.52	\$ 1.43	\$ 4.10
Diluted EPS – After cumulative catch-up adjustments				
Net income under U.S. GAAP for Basic EPS	\$ 476	\$ 433	\$ 112	\$ 295
Adjustments [net of related tax effects]:				
Interest and issue cost amortization on 7.25% convertible subordinated debentures	—	—	—	4
Interest, issue cost amortization and foreign exchange on 5% convertible subordinated debentures	17	(2)	5	—
Interest, issue cost amortization and foreign exchange on 4.875% convertible subordinated debentures	23	(3)	6	—
	\$ 516	\$ 428	\$ 123	\$ 299
Average number of Class A Subordinate Voting and Class B Shares outstanding during the period	78.5	78.5	78.4	71.9
7.25% convertible subordinated debentures	—	—	—	2.3
5% convertible subordinated debentures	6.5	6.3	6.3	—
4.875% convertible subordinated debentures	6.5	6.3	6.3	—
	91.5	91.1	91.0	74.2
Diluted EPS	\$ 5.64	\$ 4.70	\$ 1.35	\$ 4.03

- [i] The following table indicates the significant items in the consolidated balance sheets that would have been affected had the consolidated financial statements been prepared under U.S. GAAP:

	December 31,	
	2000	1999
Other assets, net	\$ 217	\$ 287
Future tax liabilities, net	98	117
Subordinated debentures	1,018	928
Debentures' interest obligation	—	—
Preferred Securities	282	282
Minority interest	287	124
Shareholders' equity:		
Capital stock	1,583	1,583
Preferred Securities	—	—
Other paid-in capital	—	—
Retained earnings	1,905	1,638
Accumulated other comprehensive loss	(324)	(215)
Shareholders' equity	\$3,164	\$3,006

- [j] Interest paid in cash was \$103 million for the year ended December 31, 2000 [for the year ended December 31, 1999 - \$84 million; for the five month period ended December 31, 1998 - \$25 million; for the year ended July 31, 1998 - \$37 million].

- [k] The Company does not recognize compensation expense for its outstanding fixed price stock options. Under U.S. GAAP, the Company is required to disclose compensation expense assuming compensation expense for the stock option plan had been determined based upon the fair value at the grant date, consistent with the methodology prescribed under FASB Statement No. 123 "Accounting for Stock-Based Compensation".

The fair value of stock options is estimated at the date of grant using the Black Scholes option pricing model with the following weighted average assumptions:

Risk free interest rate	6.25%
Expected dividend yield	1.45%
Expected volatility	24%
Expected time until exercise	4 - 7 years

The Black Scholes option valuation model used by the Company to determine fair values was developed for use in estimating the fair value of freely traded options which are fully transferable and have no vesting restrictions. In addition, this model requires the input of highly subjective assumptions, including future stock price volatility and expected time until exercise. Because the Company's outstanding stock options have characteristics which are significantly different from those of traded options, and because changes in any of the assumptions can materially affect the fair value estimate, in management's opinion, the existing models do not necessarily provide a reliable single measure of the fair value of its stock options.

Notes to Consolidated Financial Statements

(All amounts are in millions of dollars, and all tabular amounts in millions unless otherwise noted)

For purposes of proforma disclosures, the Company's net income attributable to Class A Subordinate Voting and Class B Shares and basic and diluted earnings per Class A Subordinate Voting or Class B Shares would have been:

	Years ended December 31,		Five month period ended December 31,	Year ended July 31,
	2000	1999	1998	1998
Proforma net income after cumulative catch-up adjustments attributable to Class A Subordinate Voting and Class B Shares	\$ 467	\$ 426	\$ 110	\$ 294
Proforma earnings per Class A Subordinate Voting or Class B Share after cumulative catch-up adjustments				
Basic	\$ 5.94	\$5.43	\$1.41	\$ 4.08
Diluted	\$ 5.54	\$4.62	\$1.33	\$ 4.01

The weighted average fair value of options granted during the period are as follows:

	Years ended December 31,		Five month period ended December 31,	Year ended July 31,
	2000	1999	1998	1998
Weighted average fair value of options granted during the period	\$10.54	\$9.85	—	\$16.83

- [I] Under Staff Accounting Bulletin 74, the Company is required to disclose certain information related to new accounting standards which have not yet been adopted due to delayed effective dates.

FASB Statement No. 133, "Accounting for Derivative Instruments and Hedging Activities", ["Statement 133"], as amended by FASB Statements No. 137 and 138, is effective for the Company's year ending December 31, 2001. Statement 133 requires companies to recognize all of its derivative instruments as either assets or liabilities in the consolidated balance sheet at fair value and establish certain criteria to be met in order to designate a derivative instrument as a hedge and to deem a hedge as effective. The Company has not yet implemented a new treasury management system that complies with the new documentation requirements for hedge accounting under Statement 133. The Company anticipates having a system in place for its calendar 2002 year. As a result, foreign exchange contracts used to manage foreign exchange risk related to the Company's underlying customer contracts will be marked to market through U.S. GAAP earnings during calendar 2001.

The Company has not yet completed its review of contracts for embedded derivatives. Embedded derivatives, if any, will be recorded as assets or liabilities at their fair value at January 1, 2001 and marked to market through earnings after December 31, 2000.

22. SUBSEQUENT EVENTS

On December 21, 2000, MEC announced it had entered into an agreement to acquire the account wagering operations of Ladbroke Racing Corp., The Meadows harness track, four off-track betting facilities and an interest in The Racing Network. The purchase price is \$54 million of which \$27 million will be paid in cash, \$13 million will be paid through the issuance of Class A Subordinate voting stock of MEC and \$14 million will be paid through the issuance of a 6% promissory note, of which \$7 million matures on the first anniversary of the date of the closing and \$7 million matures on the second anniversary. Subject to the receipt of regulatory approvals, the acquisition is expected to close in March 2001.

23. COMPARATIVE FIGURES

Certain comparative figures have been reclassified to conform to the current year's method of presentation.

Financial Summary

(U.S. dollars in millions, except per share figures - see Note 1)

(1) The figures presented for the year ended December 31, 1999, the five month period ended December 31, 1998 and the years ended July 31, 1998, 1997, 1996 and 1995 have been restated to reflect the Company's new accounting policies with respect to preproduction costs (see note 2 in the financial statements).

(2) All amounts up to and including the five month period ended December 31, 1998, have been restated in U.S. dollars, in accordance with accounting principles generally accepted in Canada, using the December 31, 1998 exchange rate of Cdn\$1.5305 per U.S.\$1.00.

(3) Cash flow from operations for the years ended July 31, 1998, 1997 and 1996 have been restated to exclude the effects of exchange rate changes on cash and cash equivalents as required by new accounting recommendations issued by The Canadian Institute of Chartered Accountants.

(4) 1991 figures include \$13 million of warrants to purchase Class A Subordinate Voting Shares.

Supplementary Quarterly Financial Data (unaudited)
(U.S. dollars in millions, except per share figures)

Year Ended December 31, 2000	March 31	June 30	September 30	December 31	Total
Sales	\$2,808	\$2,610	\$2,354	\$2,741	\$10,513

Share Information

The Class A Subordinate Voting Shares ("Class A Shares") are listed and traded in Canada on The Toronto Stock Exchange ("TSE") and in the United States on The New York Stock Exchange ("NYSE"). The Class B Shares are listed and traded in Canada on the TSE. As of March 12, 2001 there were 1,063 registered holders of Class A Shares and 99 holders of Class B Shares.

Distribution of Shares

	Class A	Class B
Canada	43.33%	98.99%
United States	56.65%	1.01%
Other	.02%	—

Dividends

Dividends on the Magna Class A Subordinate Voting and Class B Shares in respect of the calendar year 2000 were paid on each of March 10, June 15 and September 15, 2000 at the rate of U.S. \$0.30 per share, and on December 15, 2000 at the rate of U.S.\$0.34 per share.

A special stock dividend of one-fifth of one share of Class A Subordinate Voting Stock of Magna Entertainment Corp., Magna's non-automotive subsidiary, for each Magna Class A Subordinate Voting Share and for each Magna Class B Share was paid on March 10, 2000. Shareholders of Magna resident in Canada were deemed to elect to receive Exchangeable Shares of MEC Holdings (Canada) Inc., a Canadian subsidiary of Magna Entertainment Corp., rather than Class A Subordinate Voting Stock of Magna Entertainment Corp. unless they specifically elected otherwise in writing.

Dividends on the Class A Subordinate Voting and Class B Shares and the special stock dividend, when payable to holders who are non-residents of Canada, are generally subject to withholding tax at a rate of 25 percent (25%) unless reduced, according to the provisions of the applicable tax treaty. Currently, the reduced rate applicable to dividends paid to a resident of the United States is generally 15 percent (15%).

Price Range of Shares – Canada

The following table sets forth, for the fiscal periods indicated, the high and low sale prices of the Class A Shares and Class B Shares and volumes of Class A Shares and Class B Shares traded, in each case as reported by the TSE.

CLASS A (TSE) (\$CDN)						
Quarter	Year Ended December 31, 2000			Year Ended December 31, 1999		
	Volume	High	Low	Volume	High	Low
1st	23,615,597	72.25	55.10	18,419,087	96.00	84.35

- A, B, C and D Pillars

Finishing

- E-Coating
- Powder Coating
- Aluminum Heat Treating

Design and Engineering

- Complete CAD/CAM Capabilities
- Complete Body Engineering
- Complete FEA
- Prototypes
- Concept Vehicles
- Laser Trimming/Welding
- Complete Testing (Component/Module/System)

Metal Forming Technologies

- Hydroforming
- Stamping
- Roll Forming
- Extrusions

TESMA INTERNATIONAL INC.

Engine Systems

- Accessory Drive Belt Tensioners & Systems
- Engine Timing Drive Belt Tensioners
- Idle Assemblies
- Shaft Decoupler Mechanisms
- Over-running Alternator Decouplers
- Alternator Pulleys
- Water Pump Pulleys
- Power Steering Pump & Pulley Assemblies
- Air Conditioner Clutch Rotors
- Water Pumps
- Oil Pumps
- Aluminum Die Cast and Machined Assemblies
- Crankshaft Seals
- Oil Pans
- Front Engine Cover Modules
- Rocker Covers
- Cam Covers
- Water Outlet Pipes
- Water Cross-Over Tubes
- Thermostat Housings
- Water Management Systems
- Camshaft Phasers

Transmission Systems

- Drive Shaft Assemblies
- One & Two Piece Flexplates
- Roll Formed Transmission Components
- Die/Flow Formed Automatic Transmission Components & Assemblies
- Torque Converter Damper Plate Assemblies
- Fineblanked Components
- Aluminum Die Cast and Machined Components
- Transmission Extensions
- Transmission Oil Pans
- Transmission Oil Pumps
- Die Formed CVT Components
- Transmission Servo Assemblies

Fuel Systems

- Fuel, Radiator and Oil Caps
- Oil Cap & Dipstick Assemblies
- Fuel Filler Necks
- Refueling Vapour Recovery Valves
- Encapsulated Metal Plastic Components
- Stainless Steel Fuel Filler Modules
- Hydroformed Stainless Steel Fuel Filler Modules
- Fuel Tank Fill and Vent Tubes
- Stainless Steel Fuel Tank Assemblies

INTIER AUTOMOTIVE

Interior Systems

Cockpit Systems

- Cockpit Modules
- Instrument Panels
- Consoles
- PSIR Doors
- Assembly & Sequencing

Overhead Systems

- Complete Overhead System
- Headliner Substrates
- Consoles
- Assembly & Sequencing

Sidewall Systems

- Door Trim Modules
- Door Panels
- Hard Trim
- Assembly & Sequencing

Acoustical Management Systems

Cargo Management Systems

Package Trays

Interior Garnish Trim

Electronic Integration

Complete Interior Integration

Seating Systems

- Modular Seat Assemblies (Cut & Sew/Mould-In-Place™)
- Integrated Restraint Seats
- Integrated Airbag Restraints
- Integrated Child Safety Seats
- Occupant Sensing
- In-Vehicle Stowable Seating
- Heavy Truck Sleeper Beds
- Head Restraints and Armrests (Cut & Sew/Mould-In-Place™)
- Roof Integrated Head Restraints
- Trim Covers
- Laminated Trim
- Moulded Polyurethane Foam Pads

Seating Hardware Systems

- Adjusters (2-4-6 way manual)
- Seat Height Adjusters
- EZ Entry Mechanisms
- Fold & Tumble™ Mechanisms
- Recliners (CAM LOCK™ Disc Recliner/Pawl & Sector/Adjuster Integrated/Fold Flat Mechanisms)
- Specialty Latches
- Seat Frames
- Wire Frames
- Spring Suspension Systems
- Risers
- Folding Load Floor Panels
- Sliding Cargo Load Floor

Closure Systems

Latching Systems

- Door, Liftgate, Decklid & Hood Latches
- Strikers
- Mechanical Cable Assemblies
- Plastic Handles
- Door Handle Assemblies
- Latch Actuators

Glass Moving Systems

- Cable & Drum - Single & Dual Rail
- Arm & Sector
- Quarter System
- Rear Window Closure Systems

System Module Technologies

- Power Sliding Doors
- Power Liftgates
- Door Modules
- Integrated Closure Systems

Electro-Mechanical Systems

- Power Door Latch & Trunk Release Actuator Assemblies
- Wiper Systems
- Electrical Motors
- Navigation Systems
- Non-Contact Obstacle Detection Systems

DECOMA INTERNATIONAL INC.

Front and Rear Bumper Systems

- Spoilers and Grilles (MIC, Paint or Bright)
- GOP Mouldings & Nerf Strips
- Energy Management Systems
- Front & Rear Bumper Fascias
- Complete Front & Rear End Modules

Greenhouse Systems

- Backlite Mouldings
- Belt & Windshield Mouldings
- Pillar Appliques
- Door Surround Mouldings
- Roof Drip Mouldings
- Cowl Screens
- Window Surround Module

Body Side Systems

- Body Side Mouldings & Claddings
- Wheel Opening Mouldings
- Running Boards
- Rocker Panels
- Stone Guards/Mud Flaps
- Vertical Body Panels
- Front & Truckside Fenders
- Door Panels
- Quarter Panels
- Headlamp Covers
- Underbody Panels

Sealing Systems

- Door Primary/Secondary Seals
- Inner & Outer Belt Seals
- Glass Run Channels
- Sliding Door, Pop-Out Window & Liftgate Seals
- Complete Convertible Sealing Systems
- Expanding Seals

Polymeric Glazing Systems

- Backlites & Quarter Windows
- Decklid Appliques
- Headlamp & Tail Lamp Lenses
- Fixed Vent Windows
- Sunroofs, T-Tops & Targa Roofs

Top Systems

- Soft Tops
- Hard/Soft Tonneau Covers
- Hard Tops

Vehicle Enhancement Packages

- Tonneau Covers
- Aerodynamic Enhancements
- Brush Guards

MAGNA MIRROR SYSTEMS

Products

- Exterior Mirrors
- Interior Mirrors
- Information Mirrors
- Extendable Trailer Towing Mirrors

Electric Technologies

- Power Actuators
- Powerfold Actuators
- Memory Powerpacks

Advanced Technologies

- AMPS (Advanced Mirror Positioning System)
- Multiplex Powerpacks
- Self-Dimming Glass Technology
